NATIONAL STRATEGY FOR
HOMELAND
SECURITY

OFFICE OF HOMELAND SECURITY

JULY 2002

THE WHITE HOUSE
WASHINGTON

My fellow Americans:

Since September 11, 2001, our Nation has taken great strides to improve homeland security. Citizens, industry, and government leaders from across the political spectrum have cooperated to a degree rarely seen in American history. Congress has passed important laws that have strengthened the ability of our law enforcement agencies to investigate and prosecute terrorists and those who support them. We have formed a global coalition that has defeated terrorists and their supporters in Afghanistan and other parts of the world. More than 60,000 American troops are deployed around the world in the war on terrorism. We have strengthened our aviation security and tightened our borders. We have stockpiled medicines to defend against bioterrorism and improved our ability to combat weapons of mass destruction. We have improved information sharing among our intelligence agencies, and we have taken important steps to protect our critical infrastructure.

We are today a Nation at risk to a new and changing threat. The terrorist threat to America takes many forms, has many places to hide, and is often invisible. Yet the need for homeland security is not tied solely to today's terrorist threat. The need for homeland security is tied to our enduring vulnerability. Terrorists wish to attack us and exploit our vulnerabilities because of the freedoms we hold dear.

The U.S. government has no more important mission than protecting the homeland from future terrorist attacks. Yet the country has never had a comprehensive and shared vision of how best to achieve this goal. On October 8, I established the Office of Homeland Security within the White House and, as its first responsibility, directed it to produce the first *National Strategy for Homeland Security*.

The *National Strategy for Homeland Security* is the product of more than eight months of intense consultation across the United States. My Administration has talked to literally thousands of people—governors and mayors, state legislators and Members of Congress, concerned citizens and foreign leaders, professors and soldiers, firefighters and police officers, doctors and scientists, airline pilots and farmers, business leaders and civic activists, journalists and veterans, and the victims and their families. We have listened carefully. This is a national strategy, not a federal strategy.

We must rally our entire society to overcome a new and very complex challenge. Homeland security is a shared responsibility. In addition to a national strategy, we need compatible,

mutually supporting state, local, and private-sector strategies. Individual volunteers must channel their energy and commitment in support of the national and local strategies. My intent in publishing the *National Strategy for Homeland Security* is to help Americans achieve a shared cooperation in the area of homeland security for years to come. The *Strategy* seeks to do so by answering four basic questions:

- What is “homeland security” and what missions does it entail?
- What do we seek to accomplish, and what are the most important goals of homeland security?
- What is the federal executive branch doing now to accomplish these goals and what should it do in future?
- What should non-federal governments, the private sector, and citizens do to help secure the homeland?

The *National Strategy for Homeland Security* is a beginning. It calls for bold and necessary steps. It creates a comprehensive plan for using America’s talents and resources to enhance our protection and reduce our vulnerability to terrorist attacks. We have produced a comprehensive national strategy that is based on the principles of cooperation and partnership. As a result of this *Strategy*, firefighters will be better equipped to fight fires, police officers better armed to fight crime, businesses better able to protect their data and information systems, and scientists better able to fight Mother Nature’s deadliest diseases. We will not achieve these goals overnight... but we will achieve them.

Our enemy is smart and resolute. We are smarter and more resolute. We will prevail against all who believe they can stand in the way of America’s commitment to freedom, liberty, and our way of life.

A handwritten signature in black ink, appearing to read "G. W. Bush". The signature is fluid and cursive, with a large initial "G" and "B".

Executive Summary

This document is the first *National Strategy for Homeland Security*. The purpose of the *Strategy* is to mobilize and organize our Nation to secure the U.S. homeland from terrorist attacks. This is an exceedingly complex mission that requires coordinated and focused effort from our entire society—the federal government, state and local governments, the private sector, and the American people.¹

People and organizations all across the United States have taken many steps to improve our security since the September 11 attacks, but a great deal of work remains. The *National Strategy for Homeland Security* will help to prepare our Nation for the work ahead in several ways. It provides direction to the federal government departments and agencies that have a role in homeland security. It suggests steps that state and local governments, private companies and organizations, and individual Americans can take to improve our security and offers incentives for them to do so. It recommends certain actions to the Congress. In this way, the *Strategy* provides a framework for the contributions that we all can make to secure our homeland.

The *National Strategy for Homeland Security* is the beginning of what will be a long struggle to protect our Nation from terrorism. It establishes a foundation upon which to organize our efforts and provides initial guidance to prioritize the work ahead. The *Strategy* will be adjusted and amended over time. We must be prepared to adapt as our enemies in the war on terrorism alter their means of attack.

Strategic Objectives

The strategic objectives of homeland security in order of priority are to:

- Prevent terrorist attacks within the United States;
- Reduce America’s vulnerability to terrorism; and
- Minimize the damage and recover from attacks that do occur.

Threat and Vulnerability

Unless we act to prevent it, a new wave of terrorism, potentially involving the world’s most destructive weapons, looms in America’s future. It is a challenge as formidable as any ever faced by our Nation. But we are not daunted. We possess the determination and the

resources to defeat our enemies and secure our homeland against the threats they pose.

One fact dominates all homeland security threat assessments: terrorists are strategic actors. They choose their targets deliberately based on the weaknesses they observe in our defenses and our preparedness. We must defend ourselves against a wide range of means and methods of attack. Our enemies are working to obtain chemical, biological, radiological, and nuclear weapons for the purpose of wreaking unprecedented damage on America. Terrorists continue to employ conventional means of attack, while at the same time gaining expertise in less traditional means, such as cyber attacks. Our society presents an almost infinite array of potential targets that can be attacked through a variety of methods.

Our enemies seek to remain invisible, lurking in the shadows. We are actively engaged in uncovering them. Al-Qaeda remains America’s most immediate and serious threat despite our success in disrupting its network in Afghanistan and elsewhere. Other international terrorist organizations, as well as domestic terrorist groups, possess the will and capability to attack the United States.

Organizing for a Secure Homeland

In response to the homeland security challenge facing us, the President has proposed, and the Congress is presently considering, the most extensive reorganization of the federal government in the past fifty years. The establishment of a new Department of Homeland Security would ensure greater accountability over critical homeland security missions and unity of purpose among the agencies responsible for them.²

American democracy is rooted in the precepts of federalism—a system of government in which our state governments share power with federal institutions. Our structure of overlapping federal, state, and local governance—our country has more than 87,000 different jurisdictions—provides unique opportunity and challenges for our homeland security efforts. The opportunity comes from the expertise and commitment of local agencies and organizations involved in homeland security. The challenge is to develop interconnected and complementary systems that are reinforcing rather than duplicative and that ensure essential requirements are met. A national strategy requires a national effort.

State and local governments have critical roles to play in homeland security. Indeed, the closest relationship the average citizen has with government is at the local level. State and local levels of government have primary responsibility for funding, preparing, and operating the emergency services that would respond in the event of a terrorist attack. Local units are the first to respond, and the last to leave the scene. All disasters are ultimately local events.

The private sector—the Nation’s principal provider of goods and services and owner of 85 percent of our infrastructure—is a key homeland security partner. It has a wealth of information that is important to the task of protecting the United States from terrorism. Its creative genius will develop the information systems, vaccines, detection devices, and other technologies and innovations that will secure our homeland.

An informed and proactive citizenry is an invaluable asset for our country in times of war and peace. Volunteers enhance community coordination and action, whether at the national or local level. This coordination will prove critical as we work to build the communication and delivery systems indispensable to our national effort to detect, prevent, and, if need be, respond to terrorist attack.

Critical Mission Areas

The *National Strategy for Homeland Security* aligns and focuses homeland security functions into six critical mission areas: intelligence and warning, border and transportation security, domestic counterterrorism, protecting critical infrastructure, defending against catastrophic terrorism, and emergency preparedness and response. The first three mission areas focus primarily on preventing terrorist attacks; the next two on reducing our Nation’s vulnerabilities; and the final one on minimizing the damage and recovering from attacks that do occur. The *Strategy* provides a framework to align the resources of the federal budget directly to the task of securing the homeland.

Intelligence and Warning. Terrorism depends on surprise. With it, a terrorist attack has the potential to do massive damage to an unwitting and unprepared target. Without it, the terrorists stand a good chance of being preempted by authorities, and even if they are not, the damage that results from their attacks is likely to be less severe. The United States will take every necessary action to avoid being surprised by another terrorist attack. We must have an intelligence and warning system that can detect terrorist activity before it manifests itself in an attack so that proper preemptive, preventive, and protective action can be taken.

The *National Strategy for Homeland Security* identifies five major initiatives in this area:

- Enhance the analytic capabilities of the FBI;
- Build new capabilities through the Information Analysis and Infrastructure Protection Division of the proposed Department of Homeland Security;
- Implement the Homeland Security Advisory System;
- Utilize dual-use analysis to prevent attacks; and
- Employ “red team” techniques.

Border and Transportation Security. America historically has relied heavily on two vast oceans and two friendly neighbors for border security, and on the private sector for most forms of domestic transportation security. The increasing mobility and destructive potential of modern terrorism has required the United States to rethink and renovate fundamentally its systems for border and transportation security. Indeed, we must now begin to conceive of border security and transportation security as fully integrated requirements because our domestic transportation systems are inextricably intertwined with the global transport infrastructure. Virtually every community in America is connected to the global transportation network by the seaports, airports, highways, pipelines, railroads, and waterways that move people and goods into, within, and out of the Nation. We must therefore promote the efficient and reliable flow of people, goods, and services across borders, while preventing terrorists from using transportation conveyances or systems to deliver implements of destruction.

The *National Strategy for Homeland Security* identifies six major initiatives in this area:

- Ensure accountability in border and transportation security;
- Create “smart borders”;
- Increase the security of international shipping containers;
- Implement the Aviation and Transportation Security Act of 2001;
- Recapitalize the U.S. Coast Guard; and
- Reform immigration services.

The President proposed to Congress that the principal border and transportation security agencies—the Immigration and Naturalization Service, the U.S. Customs Service, the U.S. Coast Guard, the Animal and Plant Health Inspection Service, and the

Transportation Security Agency—be transferred to the new Department of Homeland Security. This organizational reform will greatly assist in the implementation of all the above initiatives.

Domestic Counterterrorism. The attacks of September 11 and the catastrophic loss of life and property that resulted have redefined the mission of federal, state, and local law enforcement authorities. While law enforcement agencies will continue to investigate and prosecute criminal activity, they should now assign priority to preventing and interdicting terrorist activity within the United States. The Nation’s state and local law enforcement officers will be critical in this effort. Our Nation will use all legal means—both traditional and nontraditional—to identify, halt, and, where appropriate, prosecute terrorists in the United States. We will pursue not only the individuals directly involved in terrorist activity but also their sources of support: the people and organizations that knowingly fund the terrorists and those that provide them with logistical assistance.

Effectively reorienting law enforcement organizations to focus on counterterrorism objectives requires decisive action in a number of areas. The *National Strategy for Homeland Security* identifies six major initiatives in this area:

- Improve intergovernmental law enforcement coordination;
- Facilitate apprehension of potential terrorists;
- Continue ongoing investigations and prosecutions;
- Complete FBI restructuring to emphasize prevention of terrorist attacks;
- Target and attack terrorist financing; and
- Track foreign terrorists and bring them to justice.

Protecting Critical Infrastructure and Key Assets. Our society and modern way of life are dependent on networks of infrastructure—both physical networks such as our energy and transportation systems and virtual networks such as the Internet. If terrorists attack one or more pieces of our critical infrastructure, they may disrupt entire systems and cause significant damage to the Nation. We must therefore improve protection of the individual pieces and interconnecting systems that make up our critical infrastructure. Protecting America’s critical infrastructure and key assets will not only make us more secure from terrorist attack, but will also reduce our vulnerability to natural disasters, organized crime, and computer hackers.

America’s critical infrastructure encompasses a large number of sectors. The U.S. government will seek to

deny terrorists the opportunity to inflict lasting harm to our Nation by protecting the assets, systems, and functions vital to our national security, governance, public health and safety, economy, and national morale.

The *National Strategy for Homeland Security* identifies eight major initiatives in this area:

- Unify America’s infrastructure protection effort in the Department of Homeland Security;
- Build and maintain a complete and accurate assessment of America’s critical infrastructure and key assets;
- Enable effective partnership with state and local governments and the private sector;
- Develop a national infrastructure protection plan;
- Secure cyberspace;
- Harness the best analytic and modeling tools to develop effective protective solutions;
- Guard America’s critical infrastructure and key assets against “inside” threats; and
- Partner with the international community to protect our transnational infrastructure.

Defending against Catastrophic Threats. The expertise, technology, and material needed to build the most deadly weapons known to mankind—including chemical, biological, radiological, and nuclear weapons—are spreading inexorably. If our enemies acquire these weapons, they are likely to try to use them. The consequences of such an attack could be far more devastating than those we suffered on September 11—a chemical, biological, radiological, or nuclear terrorist attack in the United States could cause large numbers of casualties, mass psychological disruption, contamination and significant economic damage, and could overwhelm local medical capabilities.

Currently, chemical, biological, radiological, and nuclear detection capabilities are modest and response capabilities are dispersed throughout the country at every level of government. While current arrangements have proven adequate for a variety of natural disasters and even the September 11 attacks, the threat of terrorist attacks using chemical, biological, radiological, and nuclear weapons requires new approaches, a focused strategy, and a new organization.

The *National Strategy for Homeland Security* identifies six major initiatives in this area:

- Prevent terrorist use of nuclear weapons through better sensors and procedures;

- Detect chemical and biological materials and attacks;
- Improve chemical sensors and decontamination techniques;
- Develop broad spectrum vaccines, antimicrobials, and antidotes;
- Harness the scientific knowledge and tools to counter terrorism; and
- Implement the Select Agent Program.

Emergency Preparedness and Response. We must prepare to minimize the damage and recover from any future terrorist attacks that may occur despite our best efforts at prevention. An effective response to a major terrorist incident—as well as a natural disaster—depends on being prepared. Therefore, we need a comprehensive national system to bring together and coordinate all necessary response assets quickly and effectively. We must plan, equip, train, and exercise many different response units to mobilize without warning for any emergency.

Many pieces of this national emergency response system are already in place. America’s first line of defense in the aftermath of any terrorist attack is its first responder community—police officers, firefighters, emergency medical providers, public works personnel, and emergency management officials. Nearly three million state and local first responders regularly put their lives on the line to save the lives of others and make our country safer.

Yet multiple plans currently govern the federal government’s support of first responders during an incident of national significance. These plans and the government’s overarching policy for counterterrorism are based on an artificial and unnecessary distinction between “crisis management” and “consequence management.” Under the President’s proposal, the Department of Homeland Security will consolidate federal response plans and build a national system for incident management in cooperation with state and local government. Our federal, state, and local governments would ensure that all response personnel and organizations are properly equipped, trained, and exercised to respond to all terrorist threats and attacks in the United States. Our emergency preparedness and response efforts would also engage the private sector and the American people.

The *National Strategy for Homeland Security* identifies twelve major initiatives in this area:

- Integrate separate federal response plans into a single all-discipline incident management plan;

- Create a national incident management system;
- Improve tactical counterterrorist capabilities;
- Enable seamless communication among all responders;
- Prepare health care providers for catastrophic terrorism;
- Augment America’s pharmaceutical and vaccine stockpiles;
- Prepare for chemical, biological, radiological, and nuclear decontamination;
- Plan for military support to civil authorities;
- Build the Citizen Corps;
- Implement the First Responder Initiative of the Fiscal Year 2003 Budget;
- Build a national training and evaluation system; and
- Enhance the victim support system.

The Foundations of Homeland Security

The *National Strategy for Homeland Security* also describes four foundations—unique American strengths that cut across all of the mission areas, across all levels of government, and across all sectors of our society. These foundations—law, science and technology, information sharing and systems, and international cooperation—provide a useful framework for evaluating our homeland security investments across the federal government.

Law. Throughout our Nation’s history, we have used laws to promote and safeguard our security and our liberty. The law will both provide mechanisms for the government to act and will define the appropriate limits of action.

The *National Strategy for Homeland Security* outlines legislative actions that would help enable our country to fight the war on terrorism more effectively. New federal laws should not preempt state law unnecessarily or overly federalize the war on terrorism. We should guard scrupulously against incursions on our freedoms.

The *Strategy* identifies twelve major initiatives in this area:

Federal level

- Enable critical infrastructure information sharing;
- Streamline information sharing among intelligence and law enforcement agencies;

- Expand existing extradition authorities;
- Review authority for military assistance in domestic security;
- Revive the President’s reorganization authority; and
- Provide substantial management flexibility for the Department of Homeland Security.

State level

- Coordinate suggested minimum standards for state driver’s licenses;
- Enhance market capacity for terrorism insurance;
- Train for prevention of cyber attacks;
- Suppress money laundering;
- Ensure continuity of the judiciary; and
- Review quarantine authorities.

Science and Technology. The Nation’s advantage in science and technology is a key to securing the homeland. New technologies for analysis, information sharing, detection of attacks, and countering chemical, biological, radiological, and nuclear weapons will help prevent and minimize the damage from future terrorist attacks. Just as science has helped us defeat past enemies overseas, so too will it help us defeat the efforts of terrorists to attack our homeland and disrupt our way of life.

The federal government is launching a systematic national effort to harness science and technology in support of homeland security. We will build a national research and development enterprise for homeland security sufficient to mitigate the risk posed by modern terrorism. The federal government will consolidate most federally funded homeland security research and development under the Department of Homeland Security to ensure strategic direction and avoid duplicative efforts. We will create and implement a long-term research and development plan that includes investment in revolutionary capabilities with high payoff potential. The federal government will also seek to harness the energy and ingenuity of the private sector to develop and produce the devices and systems needed for homeland security.

The *National Strategy for Homeland Security* identifies eleven major initiatives in this area:

- Develop chemical, biological, radiological, and nuclear countermeasures;
- Develop systems for detecting hostile intent;

- Apply biometric technology to identification devices;
- Improve the technical capabilities of first responders;
- Coordinate research and development of the homeland security apparatus;
- Establish a national laboratory for homeland security;
- Solicit independent and private analysis for science and technology research;
- Establish a mechanism for rapidly producing prototypes;
- Conduct demonstrations and pilot deployments;
- Set standards for homeland security technology; and
- Establish a system for high-risk, high-payoff homeland security research.

Information Sharing and Systems. Information systems contribute to every aspect of homeland security. Although American information technology is the most advanced in the world, our country’s information systems have not adequately supported the homeland security mission. Databases used for federal law enforcement, immigration, intelligence, public health surveillance, and emergency management have not been connected in ways that allow us to comprehend where information gaps or redundancies exist. In addition, there are deficiencies in the communications systems used by states and municipalities throughout the country; most state and local first responders do not use compatible communications equipment. To secure the homeland better, we must link the vast amounts of knowledge residing within each government agency while ensuring adequate privacy.

The *National Strategy for Homeland Security* identifies five major initiatives in this area:

- Integrate information sharing across the federal government;
- Integrate information sharing across state and local governments, private industry, and citizens;
- Adopt common “meta-data” standards for electronic information relevant to homeland security;
- Improve public safety emergency communications; and
- Ensure reliable public health information.

International Cooperation. In a world where the terrorist threat pays no respect to traditional bound-

aries, our strategy for homeland security cannot stop at our borders. America must pursue a sustained, steadfast, and systematic international agenda to counter the global terrorist threat and improve our homeland security. Our international anti-terrorism campaign has made significant progress since September 11. The full scope of these activities will be further described in the forthcoming *National Security Strategy of the United States* and the *National Strategy for Combating Terrorism*. The *National Strategy for Homeland Security* identifies nine major initiatives in this area:

- Create “smart borders”;
- Combat fraudulent travel documents;
- Increase the security of international shipping containers;
- Intensify international law enforcement cooperation;
- Help foreign nations fight terrorism;
- Expand protection of transnational critical infrastructure;
- Amplify international cooperation on homeland security science and technology;
- Improve cooperation in response to attacks; and
- Review obligations to international treaties and law.

Costs of Homeland Security

The national effort to enhance homeland security will yield tremendous benefits and entail substantial financial and other costs. Benefits include reductions in the risk of attack and their potential consequences. Costs include not only the resources we commit to homeland security but also the delays to commerce and travel. The United States spends roughly \$100 billion per year on homeland security. This figure includes federal, state, and local law enforcement and emergency services, but excludes most funding for the armed forces.

The responsibility of providing homeland security is shared between federal, state and local governments, and the private sector. In many cases, sufficient incentives exist in the private market to supply protection. Government should fund only those homeland security activities that are not supplied, or are inadequately supplied, in the market. Cost sharing between different levels of government should reflect the principles of federalism. Many homeland security activities, such as intelligence gathering and border security, are properly accomplished at the federal level. In other circum-

stances, such as with first responder capabilities, it is more appropriate for state and local governments to handle these responsibilities.

Conclusion: Priorities for the Future

The *National Strategy for Homeland Security* sets a broad and complex agenda for the United States. The *Strategy* has defined many different goals that need to be met, programs that need to be implemented, and responsibilities that need to be fulfilled. But creating a strategy is, in many respects, about setting priorities—about recognizing that some actions are more critical or more urgent than others.

The President’s Fiscal Year 2003 Budget proposal, released in February 2002, identified four priority areas for additional resources and attention in the upcoming year:

- Support first responders;
- Defend against bioterrorism;
- Secure America’s borders; and
- Use 21st-century technology to secure the homeland.

Work has already begun on the President’s Fiscal Year 2004 Budget. Assuming the Congress passes legislation to implement the President’s proposal to create the Department of Homeland Security, the Fiscal Year 2004 Budget will fully reflect the reformed organization of the executive branch for homeland security. That budget will have an integrated and simplified structure based on the six critical mission areas defined by the *Strategy*. Furthermore, at the time the *National Strategy for Homeland Security* was published, it was expected that the Fiscal Year 2004 Budget would attach priority to the following specific items for substantial support:

- Enhance the analytic capabilities of the FBI;
- Build new capabilities through the Information Analysis and Infrastructure Protection Division of the proposed Department of Homeland Security;
- Create “smart borders”;
- Improve the security of international shipping containers;
- Recapitalize the U.S. Coast Guard;
- Prevent terrorist use of nuclear weapons through better sensors and procedures;

-
- Develop broad spectrum vaccines, antimicrobials, and antidotes; and
 - Integrate information sharing across the federal government.

In the intervening months, the executive branch will prepare detailed implementation plans for these and many other initiatives contained within the *National Strategy for Homeland Security*. These plans will ensure that the taxpayers' money is spent only in a manner that achieves specific objectives with clear performance-based measures of effectiveness.

¹The *National Strategy for Homeland Security* defines "State" to mean "any state of the United States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, the Canal Zone, the Commonwealth of the Northern Mariana Islands, or the trust territory of the Pacific Islands." The *Strategy* defines "local government" as "any county, city, village, town, district, or other political subdivision of any state, any Native American tribe or authorized tribal organization, or Alaska native village or organization, and includes any rural community or unincorporated town or village or any other public entity for which an application for assistance is made by a state or political subdivision thereof."

²The distribution of the *National Strategy for Homeland Security* coincides with Congress' consideration of the President's proposal to establish a Department of Homeland Security. The *Strategy* refers to a "Department of Homeland Security" only to provide the strategic vision for the proposed Department and not to assume any one part of the President's proposal will or will not be signed into law.

Introduction

Our Nation learned a terrible lesson on September 11. American soil is not immune to evil or cold-blooded enemies capable of mass murder and terror. The worst of these enemies—and target number one in our war on terrorism—is the terrorist network Al-Qaeda. Yet the threat to America is not limited to Al-Qaeda or to suicide hijackings of commercial aircraft. The threat is much broader, as we learned on October 4, 2001, when we discovered that a life-threatening biological agent—anthrax—was being distributed through the U.S. mail.

Unless we act to prevent it, a new wave of terrorism, potentially involving the world's most destructive weapons, looms in America's future. It is a challenge as formidable as any ever faced by our Nation. But we are not daunted. We possess the determination and the resources to defeat our enemies and secure our homeland against the threats they pose.

Today's terrorists can strike at any place, at any time, and with virtually any weapon. Securing the American

homeland is a challenge of monumental scale and complexity. But the U.S. government has no more important mission.

National Strategy for Homeland Security

This document is the first ever *National Strategy for Homeland Security*. The purpose of the *Strategy* is to mobilize and organize our Nation to secure the U.S. homeland from terrorist attacks. This is an exceedingly complex mission that requires coordinated and focused effort from our entire society—the federal government, state and local governments, the private sector, and the American people.

People and organizations all across the United States have taken many steps to improve our security since the September 11 attacks, but a great deal of work remains. The *National Strategy for Homeland Security* will help prepare our Nation for the work ahead in several ways. It provides direction to the federal

government departments and agencies that have a role in homeland security. It suggests steps that state and local governments, private companies and organizations, and individual Americans can take to improve our security, and offers incentives for them to do so. It recommends certain actions to the Congress. In this way, the *Strategy* provides a framework for the contributions that we all can make to secure our homeland.

The *National Strategy for Homeland Security* is the beginning of what will be a long struggle to protect our Nation from terrorism. It provides a foundation upon which to organize our efforts and provides initial guidance to prioritize the work ahead. The *Strategy* will be adjusted and amended over time. We must be prepared to adapt as our enemies in the war on terrorism adjust their means of attack.

Homeland Security Defined

In the aftermath of September 11, “homeland security” has come to mean many things to many people. It is a new mission and a new term. The federal government defines homeland security as follows:

Definition

Homeland security is a concerted national effort to prevent terrorist attacks within the United States, reduce America’s vulnerability to terrorism, and minimize the damage and recover from attacks that do occur.

Each phrase in the definition has meaning.

Concerted national effort. The federal government has a critical role to play in homeland security. Yet the nature of American society and the structure of American governance make it impossible to achieve the goal of a secure homeland through federal executive branch action alone. The Administration’s approach to homeland security is based on the principles of shared responsibility and partnership with the Congress, state and local governments, the private sector, and the American people. The *National Strategy for Homeland Security* belongs and applies to the Nation as a whole, not just to the President’s proposed Department of Homeland Security or the federal government.

Prevent. The first priority of homeland security is to prevent terrorist attacks. The United States aims to deter all potential terrorists from attacking America through our uncompromising commitment to defeating terrorism wherever it appears. We also strive to detect terrorists before they strike, to prevent them and their instruments of terror from entering our country, and to take decisive action to eliminate the threat they pose. These efforts—which will be

described in both the *National Strategy for Homeland Security* and the *National Strategy for Combating Terrorism*—take place both at home and abroad. The nature of modern terrorism requires a global approach to prevention.

The *National Strategy for Homeland Security* attaches special emphasis to preventing, protecting against, and preparing for catastrophic threats. The greatest risk of mass casualties, massive property loss, and immense social disruption comes from weapons of mass destruction, strategic information warfare, attacks on critical infrastructure, and attacks on the highest leadership of government.

Terrorist attacks. Homeland security is focused on terrorism in the United States. The *National Strategy for Homeland Security* characterizes terrorism as any premeditated, unlawful act dangerous to human life or public welfare that is intended to intimidate or coerce civilian populations or governments. This description captures the core concepts shared by the various definitions of terrorism contained in the U.S. Code, each crafted to achieve a legal standard of specificity and clarity. This description covers kidnappings; hijackings; shootings; conventional bombings; attacks involving chemical, biological, radiological, or nuclear weapons; cyber attacks; and any number of other forms of malicious violence. Terrorists can be U.S. citizens or foreigners, acting in concert with others, on their own, or on behalf of a hostile state.

Reduce America’s vulnerability. Homeland security involves a systematic, comprehensive, and strategic effort to reduce America’s vulnerability to terrorist attack. We must recognize that as a vibrant and prosperous free society, we present an ever-evolving, ever-changing target. As we shore up our defenses in one area, the terrorists may exploit vulnerabilities in others. The *National Strategy for Homeland Security*, therefore, outlines a way for the government to work with the private sector to identify and protect our critical infrastructure and key assets, detect terrorist threats, and augment our defenses.

Because we must not permit the threat of terrorism to alter the American way of life, we have to accept some level of terrorist risk as a permanent condition. We must constantly balance the benefits of mitigating this risk against both the economic costs and infringements on individual liberty that this mitigation entails. No mathematical formula can reveal the appropriate balance; it must be determined by politically accountable leaders exercising sound, considered judgment informed by top-notch scientists, medical experts, and engineers.

Minimize the damage. The United States will prepare to manage the consequences of any future terrorist attacks that may occur despite our best efforts at prevention. Therefore, homeland security seeks to improve the systems and prepare the individuals that will respond to acts of terror. The *National Strategy for Homeland Security* recognizes that after an attack occurs, our greatest chance to minimize loss of life and property lies with our local first responders—police officers, firefighters, emergency medical providers, public works personnel, and emergency management officials. Many of our efforts to minimize the damage focus on these brave and dedicated public servants.

Recover. As an essential component of homeland security, the United States will build and maintain various financial, legal, and social systems to recover from all forms of terrorism. We must, therefore, be prepared to protect and restore institutions needed to sustain economic growth and confidence, rebuild destroyed property, assist victims and their families, heal psychological wounds, and demonstrate compassion, recognizing that we cannot automatically return to the pre-attack norm.

Objectives of the *National Strategy for Homeland Security*

Homeland security is an exceedingly complex mission. It involves efforts both at home and abroad. It demands a range of government and private sector capabilities. And it calls for coordinated and focused effort from many actors who are not otherwise required to work together and for whom security is not always a primary mission.

This *Strategy* establishes three objectives based on the definition of homeland security:

- Prevent terrorist attacks within the United States;
- Reduce America's vulnerability to terrorism; and
- Minimize the damage and recover from attacks that do occur.

The order of these objectives deliberately sets priorities for America's efforts to secure the homeland.

Principles of the *National Strategy for Homeland Security*

Our efforts in the war on terrorism are rooted in the same core American strengths and characteristics that led us to victory in World War II and the Cold War: innovation, determination, and commitment to the democratic tenets of freedom and equality. With these strengths and characteristics as our guide, eight principles have shaped the design of the *National Strategy for Homeland Security*.

Require responsibility and accountability. The *National Strategy for Homeland Security* is focused on producing results. When possible, it designates lead executive branch departments or agencies for federal homeland security initiatives. As the President announced on June 6, 2002, the *Strategy* calls for creating the Department of Homeland Security to clarify lines of responsibility for homeland security in the executive branch. The new Department would take responsibility for many of the initiatives outlined here. The *Strategy* also makes recommendations to Congress, state and local governments, the private sector, and the American people.

Mobilize our entire society. The *National Strategy for Homeland Security* recognizes the crucial role of state and local governments, private institutions, and the American people in securing our homeland. Our traditions of federalism and limited government require that organizations outside the federal government take the lead in many of these efforts. The *Strategy* provides guidance on best practices and organizing principles. It also seeks to empower all key players by streamlining and clarifying federal support processes.

Manage risk and allocate resources judiciously. The *National Strategy for Homeland Security* identifies priority programs for our finite homeland security resources. Because the number of potential terrorist acts is nearly infinite, we must make difficult choices about how to allocate resources against those risks that pose the greatest danger to our homeland. The concluding chapter of the *Strategy* identifies a set of priorities for the Fiscal Year 2004 Federal Budget.

Seek opportunity out of adversity. The *National Strategy for Homeland Security* gives special attention to programs that improve security while at the same time advancing other important public purposes or principles. We will build, for example, a national incident management system that is better able to manage not just terrorism but other hazards such as natural disasters and industrial accidents. We will build a medical system that is not simply better able to cope with bioterrorism but with all diseases and all manner of mass-casualty incidents. We will build a border

management system that will not only stop terrorist penetration but will also facilitate the efficient flow of legitimate commerce and people.

Foster flexibility. The *National Strategy for Homeland Security* emphasizes the need for a flexible response to terrorism. The terrorist threat is ever-changing because our terrorist enemies can strategically adapt their offensive tactics to exploit what they perceive to be weaknesses in our defenses. Therefore, the *Strategy* builds managerial, budgetary, and structural flexibility into the federal government's homeland security structure and suggests similar measures for the rest of the Nation. It allows for the reassessment of priorities and the realignment of resources as the terrorist threat evolves.

Measure preparedness. The *National Strategy for Homeland Security* demands accountability from every government body responsible for homeland security initiatives. Every department or agency will create benchmarks and other performance measures by which we can evaluate our progress and allocate future resources.

Sustain efforts over the long term. Protecting the homeland from terrorist attack is a permanent mission. Therefore, the *National Strategy for Homeland Security* provides an initial set of initiatives for moving closer to our homeland security objectives. Lead departments and agencies should plan to sustain homeland security initiatives for years and decades, not weeks and months.

Constrain government spending. The *National Strategy for Homeland Security* does not equate more money spent to more security earned. So in addition to new or expanded federal programs, the *Strategy* also calls for government reorganization, legal reform, essential regulation, incentives, cost-sharing arrangements with state and local governments, cooperative arrangements with the private sector, and the organized involvement of citizens. The *Strategy* recognizes that the capabilities and laws we rely upon to defend America against terrorism are closely linked to those which we rely upon to deal with non-terrorist phenomena such as crime, natural disease, natural disasters, and national security incidents. The *Strategy* aims to build upon and improve the coordination of these existing systems. It also seeks to harness the extraordinary strength and creativity of the private sector by allowing the market to solve homeland security shortfalls whenever possible.

Implementing the *National Strategy for Homeland Security*

The *National Strategy for Homeland Security* establishes, for the first time in our Nation's history, a statement of objectives around which our entire society can mobilize

to secure the U.S. homeland from the dangerous and evolving threat of terrorism.

The *National Strategy for Homeland Security* aligns and focuses homeland security functions into six critical mission areas: intelligence and warning, border and transportation security, domestic counterterrorism, protecting critical infrastructure and key assets, defending against catastrophic terrorism, and emergency preparedness and response. The first three mission areas focus primarily on preventing terrorist attacks; the next two on reducing our Nation's vulnerabilities; and the final one on minimizing the damage and recovering from attacks that do occur. The *Strategy* includes the President's proposal to establish, for the first time, clear responsibility and accountability for each of these critical mission areas—most importantly, a Secretary of Homeland Security who is appointed by the President and confirmed by the Senate.

The *National Strategy for Homeland Security* provides, for the first time, a framework to align the resources of the federal budget directly to the task of securing the homeland. Every homeland security dollar in the President's Budget for Fiscal Year 2004 will correspond with the strategy's critical mission areas. The *Strategy* also describes four foundations—unique American strengths that cut across all of the mission areas, across all levels of government, and across all sectors of our society. These foundations—law, science and technology, information sharing and systems, and international cooperation—provide a useful framework for evaluating our homeland security investments across the federal government.

The *National Strategy for Homeland Security* is, however, only a first step in a long-term effort to secure the homeland. The federal executive branch will use a variety of tools to implement the *Strategy*. The Administration will work with Congress to craft future federal homeland security budgets based on the *Strategy*, providing every department and agency involved in homeland security the required resources to execute its responsibilities. Each lead department and agency will plan and program to execute the initiatives assigned by the *National Strategy for Homeland Security*.

Each department and agency will also be accountable for its performance on homeland security efforts. The federal government will employ performance measures—and encourage the same for state and local governments—to evaluate the effectiveness of each homeland security program. These performance measures will allow agencies to measure their progress, make resource allocation decisions, and adjust priorities accordingly.

Under the President’s proposal, the Department of Homeland Security will play a central role in implementing the *National Strategy for Homeland Security*. In addition to executing its assigned initiatives, the Department would also serve as the primary federal point of contact for state and local governments, the private sector, and the American people. Working with the White House, the Department therefore would

coordinate and support implementation of non-federal tasks recommended in the *Strategy*.

Issuance of the *Strategy* overlaps with Congress’ consideration of the President’s proposal to establish the Department. Recognizing that Congress alone can create a new Department, references to a “Department of Homeland Security” are intended only to provide the strategic vision for the proposed Department.

Homeland Security and National Security

The Preamble to the Constitution defines our federal government’s basic purposes as “... to form a more perfect Union, establish justice, insure domestic Tranquility, provide for the common defense, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity.” The requirement to provide for the common defense remains as fundamental today as it was when these words were written, more than two hundred years ago.

The *National Security Strategy of the United States* aims to guarantee the sovereignty and independence of the United States, with our fundamental values and institutions intact. It provides a framework for creating and seizing opportunities that strengthen our security and prosperity. The *National Strategy for Homeland Security* complements the *National Security Strategy of the United States* by addressing a very specific and uniquely challenging threat – terrorism in the United States – and by providing a comprehensive framework for organizing the efforts of federal, state, local and private organizations whose primary functions are often unrelated to national security.

The link between national security and homeland security is a subtle but important one. For more than six decades, America has sought to protect its own sovereignty and independence through a strategy of global presence and engagement. In so doing, America has helped many other countries and peoples advance along the path of democracy, open markets, individual liberty, and peace with their neighbors. Yet there are those who oppose America’s role in the world, and who are willing to use violence against us and our friends. Our great power leaves these enemies with few conventional options for doing us harm. One such option is to take advantage of our freedom and openness by secretly inserting terrorists into our country to attack our homeland. Homeland security seeks to deny this avenue of attack to our enemies and thus to provide a secure foundation for America’s ongoing global engagement. Thus the *National Security Strategy of the United States* and *National Strategy for Homeland Security* work as mutually supporting documents, providing guidance to the executive branch departments and agencies.

There are also a number of other, more specific strategies maintained by the United States that are subsumed within the twin concepts of national security and homeland security. The *National Strategy for Combating Terrorism* will define the U.S. war plan against international terrorism. The *National Strategy to Combat Weapons of Mass Destruction* coordinates America’s many efforts to deny terrorists and states the materials, technology, and expertise to make and deliver weapons of mass destruction. The *National Strategy to Secure Cyberspace* will describe our initiatives to secure our information systems against deliberate, malicious disruption. The *National Money Laundering Strategy* aims to undercut the illegal flows of money that support terrorism and international criminal activity. The *National Defense Strategy* sets priorities for our most powerful national security instrument. The *National Drug Control Strategy* lays out a comprehensive U.S. effort to combat drug smuggling and consumption. All of these documents fit into the framework established by the *National Security Strategy of the United States* and *National Strategy for Homeland Security*, which together take precedence over all other national strategies, programs, and plans.

Threat and Vulnerability

The U.S. government has no higher purpose than to ensure the security of our people and preserve our democratic way of life. Terrorism directly threatens the foundations of our Nation—our people, our democratic way of life, and our economic prosperity. In the war on terrorism, as in all wars, the more we know about our enemy, the better able we are to defeat that enemy. The more we know about our vulnerability, the better able we are to protect ourselves.

One fact dominates all homeland security threat assessments: terrorists are strategic actors. They choose their targets deliberately based on the weaknesses they observe in our defenses and our preparations. They can balance the difficulty in successfully executing a particular attack against the magnitude of loss it might cause. They can monitor our media and listen to our policymakers as our Nation discusses how to protect itself—and adjust their plans accordingly. Where we

insulate ourselves from one form of attack, they can shift and focus on another exposed vulnerability.

We remain a Nation at war. Even as we experience success in the war on terrorism, the antipathy of our enemies may well be increasing, and new enemies may emerge. The United States will confront the threat of terrorism for the foreseeable future.

Our Free Society Is Inherently Vulnerable

The American people and way of life are the primary targets of our enemy, and our highest protective priority. Our population and way of life are the source of our Nation's great strength, but also a source of inherent vulnerability.

Our population is large, diverse, and highly mobile, allowing terrorists to hide within our midst. Americans congregate at schools, sporting arenas, malls, concert halls, office buildings, high-rise residences, and places

of worship, presenting targets with the potential for many casualties. Much of America lives in densely populated urban areas, making our major cities conspicuous targets. Americans subsist on the produce of farms in rural areas nationwide, making our heartland a potential target for agroterrorism.

The American Population

- An estimated 284.8 million people lived in the United States on July 1, 2001

Source: U.S. Department of Commerce

- 54.2% of the Nation's population lives in ten states – three in the Northeast, three in the Midwest, three in the South, and one in the West
- The average population density within the United States is 79.2 people per square mile of land
- The average population density in metropolitan areas is 320.2 people per square mile of land
- Over 225 million Americans live in metropolitan areas
- Nearly 85 million Americans live in metropolitan areas of 5 million people or more
- Each year, the United States admits 500 million people, including 330 million non-citizens, through our borders

Source: 2000 Census

- Over 4 million people were processed through security at the last Olympics, over 85,000 at the last Super Bowl, and approximately 20,000 each at the Republican and Democratic National Conventions.

Source: U.S. Secret Service

The responsibility of our government extends beyond the physical well-being of the American people. We must also safeguard our way of life, which involves five key elements: democracy, liberties, security, economics, and culture.

Democracy. Our way of life is both defined and protected by our democratic political system. It is a system anchored by the Constitution, which established a republic characterized by significant limits on governmental power through a system of checks and balances, a distribution of state and federal rights, and an affirmation of the rights and freedoms of individuals. Our democratic political system is transparent and accessible to the populace. It requires that all actions adhere to the rule of law. And it relies on the stability and continuity of our government, which is ensured by constitutionally prescribed procedures and powers.

Liberties. Liberty and freedom are fundamental to our way of life. Freedom of expression, freedom of religion, freedom of movement, property rights, freedom from unlawful discrimination—these are all rights we are guaranteed as Americans, and rights we will fight to protect. Many have fought and died in order to establish and protect these rights; we will not relinquish them.

Security. Our federal system was born, in part, out of a need to “provide for the common defense.” Americans have enjoyed great security from external threats, with no hostile powers adjacent to our borders and insulated from attack by two vast oceans. Our approach to security has had both external and internal dimensions. Externally, the United States has over the course of the past six decades sought to shape the international environment through strong global political, economic, military, and cultural engagement. Internally, we have relied primarily on law enforcement and the justice system to provide for domestic peace and order.

Economy. Our country's economy is based on a free market system predicated on private ownership of property and freedom of contract, with limited government intervention. We ask our able population to work for their individual prosperity, as our government ensures that all have equal access to the marketplace. Our formula for prosperity is one that has succeeded: we are the most prosperous Nation in the world.

Culture. The United States of America is an open, welcoming, pluralistic, diverse society that engages in dialogue rather than the dogmatic enforcement of any one set of values or ideas. Our culture is also characterized by compassion and strong civic engagement.

The Means of Attack

Terrorism is not so much a system of belief, like fascism or communism, as it is a strategy and a tactic—a means of attack. In this war on terrorism, we must defend ourselves against a wide range of means and methods of attack. Our enemies are working to obtain chemical, biological, radiological, and nuclear weapons for the stated purpose of killing vast numbers of Americans. Terrorists continue to employ conventional means of attack, such as bombs and guns. At the same time, they are gaining expertise in less traditional means, such as cyber attacks. Lastly, as we saw on September 11, our terrorist enemies are constantly seeking new tactics or unexpected ways to carry out their attacks and magnify their effects.

Weapons of mass destruction. The knowledge, technology, and materials needed to build weapons of mass destruction are spreading. These capabilities have never been more accessible and the trends are not in our favor. If our terrorist enemies acquire these weapons and the means to deliver them, they are likely to try to use them, with potential consequences far more devastating than those we suffered on September 11. Terrorists may conceivably steal or obtain weapons of mass destruction, weapons-usable fissile material, or related technology from states with such capabilities. Several state sponsors of terrorism already possess or are working to develop weapons of mass destruction, and could provide material or technical support to terrorist groups.

Chemical weapons are extremely lethal and capable of producing tens of thousands of casualties. They are also relatively easy to manufacture, using basic equipment, trained personnel, and precursor materials that often have legitimate dual uses. As the 1995 Tokyo subway attack revealed, even sophisticated nerve agents are within the reach of terrorist groups.

Biological weapons, which release large quantities of living, disease-causing microorganisms, have extraordinary lethal potential. Like chemical weapons, biological weapons are relatively easy to manufacture, requiring straightforward technical skills, basic equipment, and a seed stock of pathogenic microorganisms. Biological weapons are especially dangerous because we may not know immediately that we have been attacked, allowing an infectious agent time to spread. Moreover, biological agents can serve as a means of attack against humans as well as livestock and crops, inflicting casualties as well as economic damage.

Radiological weapons, or “dirty bombs,” combine radioactive material with conventional explosives. They

can cause widespread disruption and fear, particularly in heavily populated areas.

Nuclear weapons have enormous destructive potential. Terrorists who seek to develop a nuclear weapon must overcome two formidable challenges. First, acquiring or refining a sufficient quantity of fissile material is very difficult—though not impossible. Second, manufacturing a workable weapon requires a very high degree of technical capability—though terrorists could feasibly assemble the simplest type of nuclear device. To get around these significant though not insurmountable challenges, terrorists could seek to steal or purchase a nuclear weapon.

Conventional means. While we must prepare for attacks that employ the most destructive weapons, we must also defend against the tactics that terrorists employ most frequently. Terrorists, both domestic and international, continue to use traditional methods of violence and destruction to inflict harm and spread fear. They have used knives, guns, and bombs to kill the innocent. They have taken hostages and spread propaganda. Given the low expense, ready availability of materials, and relatively high chance for successful execution, terrorists will continue to make use of conventional attacks.

Cyber attacks. Terrorists may seek to cause widespread disruption and damage, including casualties, by attacking our electronic and computer networks, which are linked to other critical infrastructures such as our energy, financial, and securities networks. Terrorist groups are already exploiting new information technology and the Internet to plan attacks, raise funds, spread propaganda, collect information, and communicate securely. As terrorists further develop their technical capabilities and become more familiar with potential targets, cyber attacks will become an increasingly significant threat.

New or unexpected tactics. Our terrorist enemies are constantly seeking new tactics or unexpected ways to carry out attacks. They are continuously trying to find new areas of vulnerability and apply lessons learned from past operations in order to achieve surprise and maximize the destructive effect of their next attack. Our society presents an almost infinite array of potential targets, allowing for an enormously wide range of potential attack methods.

The Terrorists

Our enemies seek to remain invisible, lurking in the shadows. We are taking aggressive action to uncover individuals and groups engaged in terrorist activity, but often we will not know who our enemy is by name until after they have attempted to attack us. Therefore,

we must uncover more than just the identities of our enemy. We need to analyze the characteristics shared by terrorists to help us understand where our enemies are weak and where they are strong.

Terrorists and their tactical advantages. Terrorists enjoy certain tactical advantages. They are able to choose the time, place, and method of their attacks. As we reduce our vulnerabilities in one area, they can alter their plans and pursue more exposed targets. They are able to patiently plan their attacks for months and years. Plans are undoubtedly underway today by terrorist cells that we have not yet eliminated.

Terrorists also exploit the advantage of relative anonymity. They hide throughout the world, using the cover of innocent civilians as a shield. Weak states will remain susceptible to terrorist groups seeking safe haven, and may even cooperate with or actively support terrorists.

Known terrorist groups. Al-Qaeda remains America's most immediate and serious threat despite our success in disrupting its network in Afghanistan and elsewhere. While we have captured or killed hundreds of Al-Qaeda operatives, many remain at large, including leaders working to reconstitute the organization and resume its operations. Al-Qaeda operatives and cells will continue to plan attacks against high-profile landmarks and critical infrastructure at home and against targets in Europe, the Middle East, Africa, and Southeast Asia. Those attacks may use both conventional and unconventional means in an effort to create as much destruction and kill as many people as possible.

Al-Qaeda is part of a dangerous trend toward sophisticated terrorist networks spread across many countries, linked together by information technology, enabled by far-flung networks of financial and ideological supporters, and operating in a highly decentralized manner. Unlike traditional adversaries, these terrorist networks have no single "center of gravity" whose destruction would entail the defeat of the entire organization. While we have denied Afghanistan as a safe

haven for Al-Qaeda, unrest in politically unstable regions will continue to create an environment conducive to terrorism and capable of providing sanctuary to terrorist groups. Moreover, an unknown number of terrorist cells operate from within Western democracies, where the safeguarding of civil liberties protects them as well as their potential victims.

Al-Qaeda is only part of a broader threat that includes other international terrorist organizations with the will and capability to attack the United States. The most dangerous of these groups are associated with religious extremist movements in the Middle East and South Asia. Until September 11, Hizballah was responsible for more American deaths than all other terrorist groups combined, including those killed in the 1983 bombing of the U.S. Marine Corps barracks in Lebanon. Hizballah has never carried out an attack within the United States, but could do so if the situation in the Middle East worsens or the group feels threatened by U.S. actions. Other terrorist groups, from Hamas to the Real Irish Republican Army, have supporters in the United States. To date, most of these groups have largely limited their activities in the United States to fundraising, recruiting, and low-level intelligence, but many are capable of carrying out terrorist acts within the United States.

Terrorist groups also include domestic organizations. The 1995 bombing of the Murrah Federal Building in Oklahoma City highlights the threat of domestic terrorist acts designed to achieve mass casualties. The U.S. government averted seven planned terrorist acts in 1999—two were potentially large-scale, high-casualty attacks being organized by domestic extremist groups. Both domestic terrorist groups (such as the National Alliance, the Aryan Nation, and the extremist Puerto Rican separatist group Los Macheteros) and special interest extremist groups continue to pose a threat to the peace and stability of our country.

Organizing for a Secure Homeland

The tactics of modern terrorists are unbounded by the traditional rules of warfare. Terrorists transform objects of daily life into weapons, visiting death and destruction on unsuspecting civilians. Defeating this enemy requires a focused and organized response. The President took a critical step by proposing the creation of the Department of Homeland Security. The creation of the Department, the most significant reorganization of the federal government in more than a half-century, will give the United States a foundation for our efforts to secure the homeland. The Department would serve as the unifying core of the vast national network of organizations and institutions involved in homeland security.

American Federalism and Homeland Security

American democracy is rooted in the precepts of federalism—a system of government in which our state governments share power with federal institutions. The Tenth Amendment reserves to the states and to the people all power not specifically delegated to the federal government. Our structure of overlapping federal, state, and local governance—the United States has more than 87,000 different jurisdictions—provides unique opportunities and challenges. The opportunity comes from the expertise and commitment of local agencies and organizations involved in homeland security. The challenge is to develop complementary systems that avoid duplication and ensure essential

requirements are met. To meet the terrorist threat, we must increase collaboration and coordination—in law enforcement and prevention, emergency response and recovery, policy development and implementation—so that public and private resources are better aligned to secure the homeland.

American People

All of us have a key role to play in America's war on terrorism. Terrorists may live and travel among us and attack our homes and our places of business, governance, and recreation. In order to defeat an enemy who uses our very way of life as a weapon—who takes advantage of our freedoms and liberties—every American must be willing to do his or her part to protect our homeland.

Since September 11, thousands of individuals have stepped forward to ask, "What can I do to help?" The President launched Citizen Corps in January 2002 to help channel this volunteerism, and individuals in all 50 states and U.S. territories have signed up since. In support of this effort, Citizen Corps released a guidebook—produced by the National Crime Prevention Council with support from the Department of Justice—to provide the American people with information about the latest disaster preparedness techniques. As part of Citizen Corps, the Federal Emergency Management Agency's Community Emergency Response Team program trains volunteers to support our first responders by providing immediate help to victims and by organizing volunteers at disaster sites. Citizen Corps is expanding the Neighborhood Watch Program to incorporate terrorism prevention and education into its existing crime prevention mission. Volunteers in Police Service will encourage the use of civilian volunteers to support resource-constrained police departments. The Medical Reserve Corps will provide communities with medical volunteers—both active and retired—who can assist health care professionals during a large-scale local emergency. Finally, Operation TIPS (Terrorism Information and Prevention System) will be a nationwide program to help thousands of American truck drivers, letter carriers, train conductors, ship captains, and utility workers report potential terrorist activity. Operation TIPS will begin a pilot program in ten cities in August 2002.

Private Sector

Given our traditions of limited government, the American private sector provides most of our goods and services. Private companies are a key source of new ideas and innovative technologies that will enable us to

triumph over the terrorist threat. There are, for example, pharmaceutical companies producing new vaccines against dangerous biological agents and information technology firms investing in new communications technology for first responders. The President has sought to tap into this creative genius by establishing a national Homeland Security Advisory Council and calling on private citizens to serve on similar boards at the state and local level.

The private sector also owns the vast majority of America's critical infrastructure. It includes crucial systems such as the agricultural and food distribution processes that put food on our tables, utility companies that provide water and power to our homes and businesses, and transportation systems that fly us from city to city and bus our children to and from school. The private sector also includes many of our academic institutions and a host of scientific, medical, engineering, and technological research facilities.

A close partnership between the government and private sector is essential to ensuring that existing vulnerabilities to terrorism in our critical infrastructure are identified and eliminated as quickly as possible. The private sector should conduct risk assessments on their holdings and invest in systems to protect key assets. The internalization of these costs is not only a matter of sound corporate governance and good corporate citizenship but also an essential safeguard of economic assets for shareholders, employees, and the Nation. (See *Costs of Homeland Security* chapter for additional discussion.)

State and Local Governments

State, county, municipal, and local governments fund and operate the emergency services that would respond in the event of a terrorist attack. Ultimately, all manmade and natural disasters are local events—with local units being the first to respond and the last to leave. Since September 11, every state and many cities and counties are addressing homeland security issues either through an existing office or through a newly created office. Many have established anti-terrorism task forces. Many have also published or are preparing homeland security strategies, some based on existing plans for dealing with natural disasters. Each level of government must coordinate with other levels to minimize redundancies in homeland security actions and ensure integration of efforts. The federal government must seek to utilize state and local knowledge about their communities and then share relevant information with the state and local entities positioned to act on it. (A summary of homeland

security actions taken to date by states, counties, and cities is contained in a companion volume.)

Federal Executive Branch

The President's most important job is to protect the American people. To do so, he relies on the departments and agencies of the executive branch, which are responsible for executing and enforcing the federal laws, as well as the White House and other offices of the Executive Office of the President, which develop and implement his policies and programs.

Department of Homeland Security. The President's proposal to create the Department of Homeland Security is the outcome of a comprehensive study of the federal government's current structure, the experience gained since September 11, and the new information we have learned about our enemies while fighting a war. The new Department would bring together 22 entities with critical homeland security missions and would provide us for the first time with a single federal department whose primary mission is to protect our homeland against terrorist threats. The Department would play a central role in implementing the *National Strategy for Homeland Security*. It would be responsible for many specific initiatives and would also streamline relations with the federal government for our state and local governments, private sector, and the American people. This Department, although focused primarily on homeland security, would continue to execute the non-homeland security missions of its constituent parts.

White House Office of Homeland Security. Even after the Department of Homeland Security begins to function, the White House Office of Homeland Security will continue to play a key role advising the President and coordinating the interagency process. It will continue to work with the Office of Management and Budget to develop and defend the President's homeland security budget proposals. It will certify that the budgets of other executive branch departments will enable them to carry out their homeland security responsibilities.

Department of Defense. The Department of Defense contributes to homeland security through its military missions overseas, homeland defense, and support to civil authorities. Ongoing military operations abroad have reduced the terrorist threat against the United States. There are three circumstances under which the Department would be involved in improving security at home. In extraordinary circumstances, the Department would conduct military missions such as combat air patrols or maritime defense operations. The Department would take the lead in defending the people and the territory of our country, supported by other agencies. Plans for such contingencies will

continue to be coordinated, as appropriate, with the National Security Council, Homeland Security Council, and other federal departments and agencies. Second, the Department of Defense would be involved during emergencies such as responding to an attack or to forest fires, floods, tornadoes, or other catastrophes. In these circumstances, the Department may be asked to act quickly to provide capabilities that other agencies do not have. Finally, the Department of Defense would also take part in "limited scope" missions where other agencies have the lead—for example, security at a special event like the recent Olympics.

Other federal departments and agencies. Many other government departments and agencies support homeland security as part of their overall mission. The Attorney General, as America's chief law enforcement officer, will lead our Nation's law enforcement effort to detect, prevent, and investigate terrorist activity within the United States. The Department of Agriculture's Food Safety Inspection and Agricultural Research Services have important homeland security responsibilities for preventing agroterrorism. The Centers for Disease Control and Prevention and the National Institutes of Health, both part of the Department of Health and Human Services, provide critical expertise and resources related to bioterrorism. Several other federal entities have significant counterterrorism intelligence responsibilities, including the CIA's Counterterrorist Center and the FBI's Counterterrorism Division and Criminal Intelligence Section. The CIA is specifically responsible for gathering and analyzing all information regarding potential terrorist threats abroad. The proposed Information Analysis and Infrastructure Protection Division within the Department of Homeland Security would be able not only to access and analyze homeland security information, but also to translate it into warning and protective action.

Intergovernmental coordination. There is a vital need for cooperation between the federal government and state and local governments on a scale never before seen in the United States. Cooperation must occur both horizontally (within each level of government) and vertically (among various levels of government). Under the President's proposal, the creation of the Department of Homeland Security will simplify the process by which governors, mayors, and county leaders interact with the federal government. We cannot and will not create separate and specialized coordinating bodies for every functional area of government. To do so would merely replicate the stovepiped system that exists today and would defeat a main purpose of creating the new Department.

Because of our federalist traditions and our large number of local governments, the federal government must look to state governments to facilitate close coordination and cooperation among all levels of government—federal, state, and local. Therefore, the President calls on each governor to establish a single Homeland Security Task Force (HSTF) for the state, to serve as his or her primary coordinating body with the federal government. This would realign the existing Anti-Terrorism Task Forces, established after September 11 in 93 federal judicial districts

nationwide, to serve as the law enforcement component of the broader HSTFs. The HSTFs would provide a collaborative, cost-effective structure for effectively communicating to all organizations and citizens. They would help streamline and coordinate all federal, regional, and local programs. They would also fit neatly into the regional emergency response network that the Department of Homeland Security would inherit from FEMA.

Intelligence and Warning

Terrorism depends on surprise. With it, a terrorist attack has the potential to do massive damage to an unwitting and unprepared target. Without it, the terrorists stand a good chance of being thwarted by authorities, and even if they are not, the damage from their attacks is likely to be less severe.

It follows that the United States must take every appropriate action to avoid being surprised by another terrorist attack. To secure the homeland, we must have an intelligence and warning system that is capable of detecting terrorist activity before it manifests itself in an attack so that proper preemptive, preventive, and protective action can be taken.

This is not the first time in American history that we have had to focus on our early warning capabilities. The Japanese attack on Pearl Harbor on December 7, 1941, demonstrated the catastrophic consequences of allowing an enemy to achieve even tactical surprise. With the dawn of the nuclear age, early warning

became essential to national survival. The United States spent billions of dollars during the Cold War on ground- and space-based sensors that had one principal, overriding purpose: to detect indications of a nuclear attack by the Soviet Union. These early warning systems were the foundation for strategic nuclear deterrence because they provided the President sufficient lead-time to make retaliatory decisions.

Early warning of an impending terrorist attack is a far more difficult and complex mission than was early warning of a strategic nuclear first strike. Whereas we almost always know the identity, location, and general capabilities of hostile nations, we frequently do not know the identity or location of non-state terrorist organizations. The indications of terrorist intent are often ambiguous. Terrorists are able to infiltrate and move freely within democratic countries making themselves effectively invisible against the backdrop of an enormously diverse and mobile society. Efforts to gather intelligence on potential terrorist threats can

affect the basic rights and liberties of American citizens.

Moreover, the question of how to achieve early warning of terrorist threats is inseparable from the question of what to do with some warning information once it is in hand. What preventive action should be taken? What protective action should be taken? To whom should the information be provided on a confidential basis? Should the public be informed and, if so, how and by whom? These very concrete decisions can have life-or-death implications. Unfortunately, the ambiguous nature of most intelligence on terrorist threats means that these decisions must often be made in conditions of great uncertainty.

America's intelligence community has made significant contributions to our national security and is now making adjustments to help meet the increased needs for homeland security. At present, we have insufficient human source intelligence developed overseas about potential terrorist activities in the United States. Agencies at all levels of government have not always fully shared homeland security information due to real and perceived legal and cultural barriers, as well as the limitations of their information systems. The United States needs to do a better job of utilizing information contained in foreign-language documents that we have obtained. In addition, our intelligence community must identify, collect, and analyze the new observables that will enable us to better understand emerging unconventional threats.

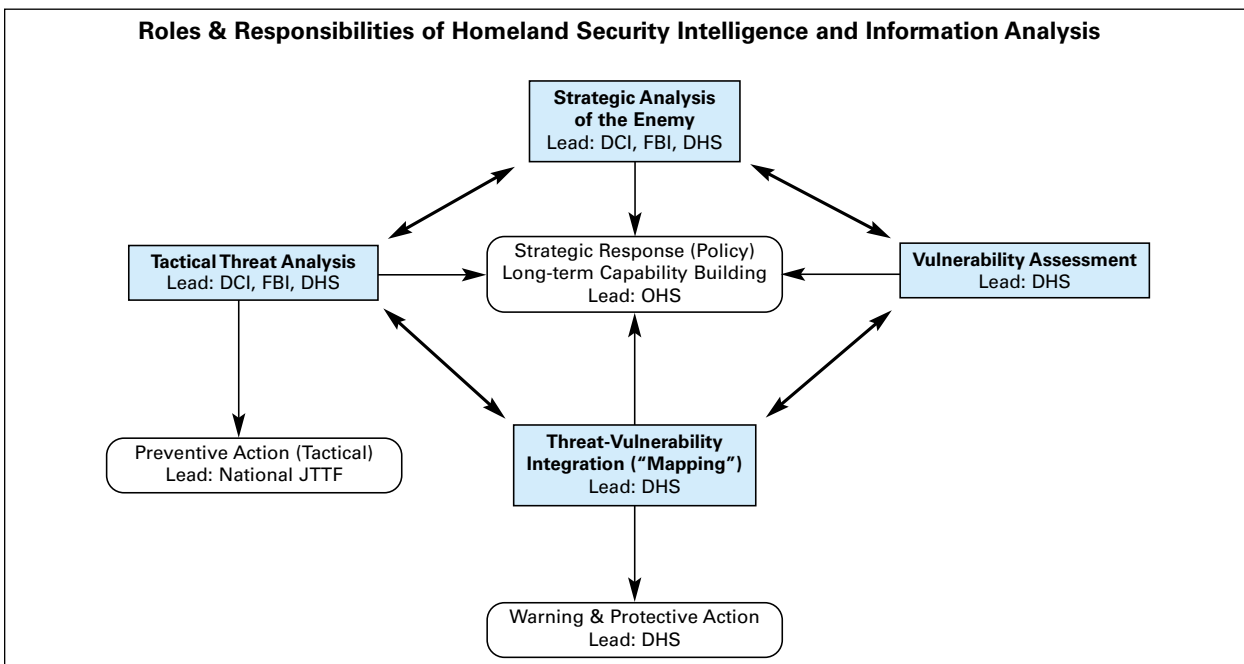

The *National Strategy for Homeland Security* reflects the concept that intelligence and information analysis is not a separate, stand-alone activity but rather an

integral component of our Nation's overall effort to protect against and reduce our vulnerability to terrorism. The basic roles and responsibilities in this *Strategy* are depicted in Figure 1.

This framework recognizes four interrelated but distinct categories of intelligence and information analysis, as well as three broad categories of actions that can follow from this analysis. The analytic categories are as follows.

Tactical threat analysis. Actionable intelligence is essential for preventing acts of terrorism. The timely and thorough analysis and dissemination of information about terrorists and their current and potential activities allow the government to take immediate- and near-term action to disrupt and prevent terrorist acts and to provide useful warning to specific targets, security and public safety professionals, or the general population.

Strategic analysis of the enemy. Our intelligence agencies must have a deep understanding of the organizations that may conduct terrorist attacks against the United States. Knowing the identities, financial and political sources of support, motivation, goals, current and future capabilities, and vulnerabilities of these organizations will assist us in preventing and preempting future attacks, and in taking long-term actions that can weaken support for organizations that seek to damage U.S. interests. Intelligence agencies can support the long-term U.S. strategies to defeat terrorism by understanding the roots of terrorism overseas, and the intentions and capabilities of foreign governments to disrupt terrorist groups in their territories and to assist the United States.

Vulnerability assessments. Vulnerability assessments must be an integral part of the intelligence cycle for homeland security issues. They allow planners to project the consequences of possible terrorist attacks against specific facilities or different sectors of the economy or government. These projections allow authorities to strengthen defenses against different threats. Such assessments are informed by the use of tools such as computer modeling and analysis.

Threat-Vulnerability integration. Mapping terrorist threats and capabilities—both current and future—against specific facility and sectoral vulnerabilities will allow authorities to determine which organizations pose the greatest threats and which facilities and sectors are most at risk. It will also allow planners to develop thresholds for preemptive or protective action.

Figure 1 also depicts three broad categories of action that can result from this analysis.

Tactical preventive action. Analysis can, and must, be turned into action that prevents terrorists from carrying out their plots. The United States has at its disposal numerous tools that allow for the disruption of terrorist acts in the United States and the detention of the terrorists themselves. These tools can be deployed as soon as the analysis uncovers evidence of terrorist planning. This analysis and assessment will help support and enable the actions taken by the U.S. government to prevent terrorism.

Warning and protective action. Inclusive and comprehensive analysis allows the government to take protective action, and to warn appropriate sectors and the public. Defensive action will reduce the potential effectiveness of an attack by prompting relevant sectors to implement security and incident management plans. In addition, defensive action works as a deterrent to terrorists weighing the potential effectiveness of their plans. Warnings allow entities and citizens to take appropriate actions to meet the threat, including upgrading security levels in any affected sectors, activating emergency plans, dispatching state and local law enforcement patrols, and increasing citizen awareness of certain activities.

Strategic response (policy). The enemy of today is far different from those we have faced in the past. The strategies and operating procedures used to fight the traditional strategic threats of the 20th century are of little use in the war on terrorism. We need to develop and create new capabilities specifically designed to defeat the enemy of today and the enemy of the future. This immediate- and long-term strategic capability building will be shaped through budgetary allocations, and will be informed by the careful analysis and assessment of homeland security information.

Understanding terrorist organizations will allow policymakers to fashion policies that build international coalitions against terrorism, and eliminate sources of support or sanctuary for terrorists.

National Vision

The collection and analysis of homeland security intelligence and information has become a priority of the highest measure. The intelligence community must enhance its capacity to obtain intelligence relevant to homeland security requirements. The intelligence profession must attract America's brightest and most energetic and allow them to acquire and apply the expertise needed to assure homeland security. In addition, the intelligence community must expand human source intelligence, and develop and utilize technology to enhance analytic, collection, and operational efforts throughout the counterterrorism community. Homeland security intelligence and information must be fed instantaneously into the Nation's domestic anti-terrorism efforts. Those efforts must be structured to provide all pertinent homeland security intelligence and law enforcement information—from all relevant sectors including state and local law enforcement as well as federal agencies—to those able to take preventive or protective action. Under the President's proposal, the new Department will provide real-time actionable information—in the form of protective actions that should be taken in light of terrorist threats, trends, and capabilities, and U.S. vulnerabilities—to policymakers, federal, state, and local law enforcement agencies and the private sector, based on the review and analysis of homeland security information.

Major Initiatives

Enhance the analytic capabilities of the FBI. The Attorney General and the Director of the FBI have established the FBI's top priority as preventing terrorist attacks. They are creating an analytical capability within the FBI that can combine lawfully obtained domestic information with information lawfully derived from investigations, thus facilitating prompt investigation of possible terrorist activity within the United States.

The FBI is instituting several changes as it redefines its mission to focus on preventing terrorist attacks. To

enhance the FBI's analytic capabilities, the Director is seeking to increase the number of staff working to analyze intelligence more than fourfold compared to pre-September 11 figures. The Bureau will hire analysts with specialized expertise, including foreign language capacity, computer skills, and science and engineering backgrounds. The CIA will send approximately 25 of its analysts to the FBI, enhancing not only the FBI's analytical capabilities but also the relationship between these two entities.

Build new capabilities through the Information Analysis and Infrastructure Protection Division of the proposed Department of Homeland Security. The President's proposal to create the Department of Homeland Security would build new and necessary capabilities into the Information Analysis and Infrastructure Protection Division of the Department. Currently, the U.S. government does not perform comprehensive vulnerability assessments of all our Nation's critical infrastructure and key assets. Such vulnerability assessments are important from a planning perspective in that they enable authorities to evaluate the potential effects of an attack on a given facility or sector, and then to invest accordingly in protecting such facilities and sectors. The Department of Homeland Security would have the responsibility and capability of performing these comprehensive vulnerability assessments. (See *Protecting Critical Infrastructure and Key Assets* chapter for additional discussion.)

The vulnerability assessments, important in their own right, are also building blocks for a key homeland security function that currently is not being performed: threat-vulnerability integration. Today, no government entity is responsible for analyzing terrorist threats to the homeland, mapping those threats against our vulnerabilities, and taking protective action. Our intelligence and federal law enforcement agencies focus on the detection and disruption of each individual threat. The Department of Homeland Security, informed by intelligence and information analysis and vulnerability assessments, would focus on longer-term protective measures, such as the setting of priorities for critical infrastructure protection and "target-hardening." (See *Protecting Critical Infrastructure and Key Assets* chapter for additional discussion.)

To perform this function, the Secretary of the new Department of Homeland Security would have broad statutory authority to access intelligence information, as well as other types of information, relevant to the terrorist threat to our Nation. Indeed, the President's proposal not only permits, but requires, each executive agency to promptly provide the Secretary all reports, assessments, and analytical information relating to the missions of the new Department. The Department

would also work with state and local law enforcement and the private sector to leverage the critical homeland security information in the possession of these entities.

In addition to transforming homeland security information into long-term protective action, the Department of Homeland Security would also turn the information into useful warnings. The Department would serve as the primary provider of threat information to state and local public safety agencies and to private sector owners of key targets, thereby minimizing confusion, gaps and duplication.

The combination of these new capabilities within the Department of Homeland Security and the existing and enhanced capabilities of our Nation's intelligence and law enforcement communities would enable the federal government to combat terrorism with maximum effect.

Implement the Homeland Security Advisory System. The Homeland Security Advisory System disseminates information regarding the risk of terrorist acts to federal, state, and local authorities, the private sector and the American people. The Advisory System creates a common vocabulary, context, and structure for the ongoing national discussion about the nature of the threats that confront the homeland and the appropriate measures that should be taken in response. It seeks to inform and facilitate decisions appropriate to different levels of government and to private citizens at home and at work. The Department of Homeland Security would be responsible for managing the Advisory System.

The Advisory System provides a national framework for public announcements of threat advisories and alerts to notify law enforcement and state and local government officials of threats. They serve to inform the public about government preparations, and to provide the public with the information necessary to respond to the threat. The Advisory System characterizes appropriate levels of vigilance, preparedness, and readiness in a series of graduated threat conditions. Each threat condition has corresponding suggested measures to be taken in response. Such responses include increasing surveillance of critical locations, preparing to execute contingency procedures, and closing public and government facilities.

Utilize dual-use analysis to prevent attacks. Terrorists use equipment and materials to carry out their criminal acts. Such equipment and material can include items such as fermenters, aerosol generators, protective gear, antibiotics, and disease-causing agents. Many of these items are "dual-use" items—they have not just terrorist applications, but also legitimate commercial applications, and can often be bought on the open market. If

suspect dual-use acquisitions are identified, cross-referenced with intelligence and law enforcement databases, and mapped against threat analyses, the U.S. government's ability to detect terrorist activities at the preparation stage will be enhanced. Therefore, the federal government, led by the Department of Homeland Security, will evaluate and study mechanisms through which suspect purchases of dual-use equipment and materials can be reported and analyzed. (See *Defending against Catastrophic Threats* chapter for a discussion of the Select Agent Program.)

Employ "red team" techniques. The Department of Homeland Security, working with the intelligence community, would utilize "red team" techniques to improve and focus of the Nation's defenses against terrorism. Applying homeland security intelligence and

information, the new Department would have certain employees responsible for viewing the United States from the perspective of the terrorists, seeking to discern and predict the methods, means and targets of the terrorists. Today's enemies do not think and act in the same manner as yesterday's. The new Department would use its capabilities and analysis to learn how they think in order to set priorities for long-term protective action and "target hardening." Employing "red team" tactics, the new Department would seek to uncover weaknesses in the security measures at our Nation's critical infrastructure sectors during government-sponsored exercises. (See *Protecting Critical Infrastructure and Key Assets* chapter for additional discussion.)

Border and Transportation Security

The United States shares a 5,525 mile border with Canada and a 1,989 mile border with Mexico. Our maritime border includes 95,000 miles of shoreline and navigable waterways as well as a 3.4 million square mile exclusive economic zone. All people and goods legally entering into the United States must be processed through an air, land, or sea port of entry. Many international airports are dispersed throughout the United States. Each year, more than 500 million people legally enter our country. Some 330 million are non-citizens; more than 85 percent enter via land borders, often as daily commuters. An enormous volume of trade also crosses our borders every day—some \$1.35 trillion in imports and \$1 trillion in exports were processed in 2001.

America historically has relied heavily on two vast oceans and two friendly neighbors for border security, and on the private sector for most forms of domestic transportation security. The increasing mobility and destructive potential of modern terrorism has required the United States to rethink and rearrange fundamentally its systems for border and transportation security. Indeed, we must now begin to conceive of border security and transportation security as fully integrated requirements because our domestic transportation systems are intertwined inextricably with the global transport infrastructure. Virtually every community in America is connected to the global transportation network by the seaports, airports, highways, pipelines, railroads, and waterways that move people and goods into, within, and out of the Nation. We therefore must promote the efficient and reliable flow of people,

goods, and services across borders, while preventing terrorists from using transportation conveyances or systems to deliver implements of destruction.

National Vision

A single entity in the Department of Homeland Security will manage who and what enters our homeland in order to prevent the entry of terrorists and the instruments of terror while facilitating the legal flow of people, goods, and services on which our economy depends. The Department and its partners will conduct border-security functions abroad to the extent allowed by technology and international agreements. Federal law enforcement agencies will take swift action against those who introduce contraband or violate terms of entry and pose threats to the American people. The U.S. government will work with the international community and the private sector to secure the transportation systems which link American communities to the world, moving people and goods across our borders and throughout the country within hours.

Major Initiatives

Ensure accountability in border and transportation security. The President has proposed to Congress that the principal border and transportation security agencies—the Immigration and Naturalization Service, U.S. Customs Service, U.S. Coast Guard, Animal and Plant Health Inspection Service, and Transportation Security Agency—be transferred to the new Department of Homeland Security. The new Department also would control the issuance of visas to foreigners through the Department of State and would coordinate the border-control activities of all federal agencies that are not incorporated within the new Department.

Create “smart borders.” Our future border management system will be radically different from today’s which focuses on linear borders. It will create a “border of the future” that will be a continuum framed by land, sea, and air dimensions, where a layered management system enables greater visibility of vehicles, people, and goods coming to and departing from our country. This border of the future will provide greater security through better intelligence, coordinated national efforts, and unprecedented international cooperation against the threats posed by terrorists, the implements

of terrorism, international organized crime, illegal drugs, illegal migrants, cyber crime, and the destruction or theft of natural resources. At the same time, the border of the future will be increasingly transparent to the efficient flow of people, goods, and conveyances engaged in legitimate economic and social activities. The federal government will allocate resources in a balanced way to manage risk in our border and transportation security systems while ensuring the expedient flow of goods, services, and people.

Internationally, the United States will seek to screen and verify the security of goods and identities of people before they can harm to the international transportation system and well before they reach our shores or land borders. The Department of Homeland Security would improve information provided to consular officers so that individual applicants can be checked in comprehensive databases and would require visa-issuance procedures to reflect threat assessments. The United States will require visitors to present travel documentation that includes biometric identifiers. The United States will also work with international organizations and the private sector to improve the security of people, goods, conveyances traveling internationally, and the ports that they use. The United States will work with other countries and international organizations to improve the quality of travel documents and their issuance to minimize their misuse by smugglers and terrorist organizations. We will also assist other countries, as appropriate, to improve their border controls and their coordination with us. Finally, we will work closely with Canada and Mexico to increase the security of our shared borders while facilitating commerce within the North American Free Trade Agreement (NAFTA) area.

At our borders, the Department of Homeland Security would verify and process the entry of people in order to prevent the entrance of contraband, unauthorized aliens, and potential terrorists. The Department would increase the information available on inbound goods and passengers so that border management agencies can apply risk-based management tools. The Department would develop and deploy the statutorily required entry-exit system to record the arrival and departure of foreign visitors and guests. It would develop and deploy non-intrusive inspection technologies to ensure rapid and more thorough screening of goods and conveyances. And it would monitor all our borders in order to detect illegal intrusions and intercept and apprehend smuggled goods and people attempting to enter illegally.

The Department of Homeland Security proposed by the President will also build an immigration services

organization that administers immigration laws in an efficient, expeditious, fair, and humane manner. The Department would ensure that foreign visitors comply with entry conditions. The Department, in cooperation with colleges and universities, would track and monitor international students and exchange visitors. The Department would enter into national law enforcement databases the names of high-risk aliens who remain in the United States longer than authorized and, when warranted, deport illegal aliens.

Increase the security of international shipping containers. Containers are an indispensable but vulnerable link in the chain of global trade; approximately 90 percent of the world's cargo moves by container. Each year, nearly 50 percent of the value of all U.S. imports arrives via 16 million containers. The core elements of this initiative are to establish security criteria to identify high-risk containers; pre-screen containers before they arrive at U.S. ports; use technology to inspect high-risk containers; and develop and use smart and secure containers. The United States will place inspectors at foreign seaports to screen U.S.-bound sea containers before they are shipped to America, initially focusing on the top 20 "mega" ports (including Rotterdam, Antwerp, and Le Havre), because roughly 68 percent of the 5.7 million sea containers entering the United States annually arrive from these seaports.

Implement the Aviation and Transportation Security Act of 2001. On November 19, 2001, the President signed into law the Aviation and Transportation Security Act of 2001. The act established a series of challenging but important milestones toward achieving a secure air travel system. More broadly, however, the act fundamentally changed the way transportation security will be performed and managed in the United States. The continued growth of the world economy—and, in particular, commercial transportation and tourism—depends upon effective transportation security measures being efficiently applied. The act recognized the importance of security for all forms of transportation and related infrastructure elements. This cannot be accomplished by the federal government in isolation and requires strengthened partnerships among federal, state, and local government officials and the private sector to reduce vulnerabilities and adopt the best practices available today. Protection of critical transportation assets such as ports, pipelines, rail, and highway bridges, and more than 10,000 FAA facilities is another key requirement established by the act. Additionally, the Transportation Security Administration will coordinate federal efforts to secure

the national airspace—an essential medium for travel, commerce, and recreation.

The federal government will work with the private sector to upgrade security in all modes of transportation. Areas of emphasis will include: commercial aviation and other mass transportation systems; intermodal transportation; hazardous and explosive materials; national airspace; shipping container security; traffic-management systems; critical infrastructure; surety of transportation operators and workers; linkages with international transportation systems; and information sharing. We will utilize existing modal relationships and systems to implement unified, national standards for transportation security.

Recapitalize the U.S. Coast Guard. The Budget for Fiscal Year 2003 requested the largest increase in the history of the U.S. Coast Guard. The Budget for Fiscal Year 2004 will continue to support the recapitalization of the U.S. Coast Guard's aging fleet, as well as targeted improvements in the areas of maritime domain awareness, command and control systems, and shore-side facilities. The United States asks much of its U.S. Coast Guard and we will ensure the service has the resources needed to accomplish its multiple missions. We saw the dedication and the versatility of the U.S. Coast Guard in the aftermath of September 11, a performance that vividly demonstrated the U.S. Coast Guard's vital contribution to homeland security. Nevertheless, the U.S. Coast Guard is also responsible for national defense, maritime safety, maritime mobility, and protection of natural resources, and would continue to fulfill these functions in the Department of Homeland Security.

Reform immigration services. The Administration will complete reform of the Immigration and Naturalization Service (INS), separating the agency's enforcement and service functions within, as the President has proposed, the new Department of Homeland Security. This reform aims to ensure full enforcement of the laws that regulate the admission of aliens to the United States and to improve greatly the administration of immigration benefits to more than 7 million annual applicants. Americans have long cherished our identity as a nation of immigrants. This reform will ensure that every applicant's case is reviewed in a timely and courteous way. Finally, the Department of Homeland Security would implement the Enhanced Border Security and Visa Entry Reform Act, including the requirement that foreign visitors possess travel documents with biometric information.

Domestic Counterterrorism

The attacks of September 11 and the catastrophic loss of life and property that resulted have redefined the mission of federal, state, and local law enforcement authorities. While law enforcement agencies will continue to investigate and prosecute criminal activity, they should now assign priority to preventing and interdicting terrorist activity within the United States.

Effectively reorienting law enforcement organizations to focus on counterterrorism objectives requires decisive action in a number of areas. Many of the necessary steps have already been taken, although additional work remains to be done before law enforcement agencies collectively can pursue the counterterrorism mission with maximum effect. The federal government has already instituted initiatives that have increased information sharing and the coordination of operations throughout the law enforcement community. Not only are the federal law enforcement and U.S. intelligence agencies communicating better with each other, the entire law

enforcement community—international, federal, state, and local—is now sharing more information. In addition, law enforcement agencies at all levels of government have worked to enhance coordination of their counterterrorism operational activities so that our collective efforts complement each other.

While the intelligence and law enforcement communities have made progress in the areas of information sharing and coordination, major shortcomings continue to exist in other important areas. Our government's ability to identify key sources of funding for terrorist activity and the methods used to finance terrorist operations remains inadequate. The U.S. government has not yet developed a satisfactory system to analyze information in order to predict and assess the threat of a terrorist attack within the United States. The federal government needs to do a better job of utilizing the distinct capabilities of state and local law enforcement to prevent terrorism by giving them access, where appropriate, to the information in our federal

databases, and by utilizing state and local information at the federal level. The FBI-led Joint Terrorism Task Forces, by including participants from state and local law enforcement as well as federal agencies, draw on state and local capabilities, and enhance intergovernmental coordination.

National Vision

We will redefine our law enforcement mission to focus on the prevention of all terrorist acts within the United States, whether international or domestic in origin. We will use all legal means—both traditional and non-traditional—to identify, halt, and, where appropriate, prosecute terrorists in the United States. We will prosecute or bring immigration or other civil charges against such individuals where appropriate and will utilize the full range of our legal authorities. We will pursue not only the individuals directly engaged in terrorist activity, but also their sources of support: the people and organizations that knowingly fund the terrorists and those that provide them with logistical assistance. To achieve these aims, we will strengthen our federal law enforcement community. In addition, we will augment the scope and quality of information available to all law enforcement. In that regard, we will build and continually update a fully integrated, fully accessible terrorist watch list. When we have identified any suspected terrorist activities, we will then use all the tools in our Nation’s legal arsenal, including investigative, criminal, civil, immigration, and regulatory powers to stop those who wish to do us harm.

Major Initiatives

Several chapters, such as *Intelligence and Warning*, *Border and Transportation Security*, and *Protecting Critical Infrastructure and Key Assets*, are closely interrelated with *Domestic Counterterrorism*. (See, for example, “Tactical Preventive Action” in the *Intelligence and Warning* chapter.) This chapter only discusses counterterrorism initiatives and actions that do not fall under other critical mission areas.

Improve intergovernmental law enforcement coordination. An effective domestic counterterrorism effort requires the participation of law enforcement personnel at all levels of government, as well as the coordination of all relevant agencies and officials. Toward this end, the FBI is expanding the Joint Terrorism Task Forces (JTTFs), now operating in 47 field offices, to all 56

FBI field offices by August 2002. The Task Forces have primary operational responsibility for terrorism investigations that are not related to ongoing prosecutions. The JTTFs, whose participants represent numerous federal agencies and state and local law enforcement, combine the national and international investigative capacity of the federal government with the state and local “on-the-beat” knowledge and capabilities.

Facilitate apprehension of potential terrorists. In order to apprehend suspected terrorists before they have the opportunity to execute their plans, we must ensure that law enforcement officers are able to access information on suspected terrorists. Several initiatives are underway to create fully accessible sources of information relating to suspected terrorists. First, the Department of Justice has expanded and will continue to expand the data included in the FBI’s National Crime Information Center (NCIC) database, which is accessible to approximately 650,000 state and local law enforcement officers. The names and identifying information of subjects of domestic and foreign terrorism investigations have already been entered into the database. The Department of Justice is adding to the NCIC database the names of over 300,000 fugitive aliens in violation of final orders of deportation. In addition, the Attorney General has directed the FBI to establish procedures with the Department of State to enable inclusion of data from the TIPOFF System—which provides information on known or suspected terrorists to immigration and consular officers—into the NCIC database. The ultimate objective of this effort is to ensure that the “cop on the beat” has access to pertinent information regarding potential terrorists.

The FBI is also establishing a consolidated terrorism watch list that will serve as a central access point for information about individuals of investigative interest. The watch list will be fully accessible to the law enforcement and intelligence communities, and will include information derived from FBI and Joint Terrorism Task Force investigations, the intelligence community, the Department of Defense, and foreign governments.

The Attorney General has directed the FBI, through its Legal Attaches, to establish procedures to obtain fingerprints, other identifying information, and available biographical data of all known or suspected terrorists who have been identified and processed by foreign law enforcement agencies, and to enter such data into the FBI’s Integrated Automated Fingerprint Identification System and other appropriate databases.

The Attorney General has also modified certain guidelines to give the FBI greater latitude to conduct

essential counterterrorism investigative activities in the United States, and to utilize commercially available computer databases in support of counterterrorism investigations, consistent with Constitutional standards. Such databases serve a key function in the effort to apprehend suspected terrorists before they carry out any terrorist act as the data contained therein can reveal patterns of criminal behavior. The Department of Justice currently is engaged in “data-mining” projects that utilize computer technology to analyze information to reveal patterns of behavior consistent with terrorist activities. For example, utilizing law enforcement and intelligence information as well as public source data, the Foreign Terrorist Tracking Task Force employs risk modeling algorithms, link analysis, historic review of past patterns of behavior, and other factors to distinguish persons who may pose a risk of terrorism from those who do not.

Continue ongoing investigations and prosecutions. The Nation’s law enforcement community currently is investigating both confirmed and suspected terrorist activity. The largest and most extensive investigation is “Penttbom”—the FBI’s inquiry into the attacks of September 11. “Penttbom” is the largest criminal investigation in history, currently involving the cooperation of numerous federal agencies, state and local law enforcement, and the intelligence and law enforcement agencies of foreign countries. Several prosecutions are now underway as a result of the “Penttbom” investigation, including the prosecution of Zacarias Moussaoui on charges of conspiring with Osama bin Laden and others to carry out the attacks of September 11.

Our counterterrorism efforts also include the investigation and prosecution of foreign and domestic terrorists unrelated to the September 11 attacks, as well as the pursuit of individuals who provide logistical support to terrorists. In addition, law enforcement agencies are pursuing a more aggressive preventive strategy by investigating and dismantling criminal rings throughout the country that sell false driver’s licenses, certifications for the transportation of hazardous materials, passports, and visas.

As the chief federal law enforcement officer, the Attorney General—relying heavily on the FBI—will lead federal law enforcement efforts in investigations and prosecutions, while coordinating with the Department of Homeland Security and other federal law enforcement agencies, as well as state and local authorities. State and local law enforcement personnel, operating within each community, are indispensable to our domestic counterterrorism efforts, playing several

critical roles, including uncovering and reporting unusual behavior and security anomalies.

Complete FBI restructuring to emphasize prevention of terrorist attacks. Our Nation’s highest law enforcement objective must be the prevention of terrorist acts—a significant shift from pre-September 11 objectives. In order to focus the mission of the federal law enforcement community on prevention, the federal government, working with Congress, needs to restructure the FBI and other federal law enforcement agencies, reallocating certain resources and energies to the new prevention efforts.

The FBI already has made several structural changes to reflect the primacy of the counterterrorism mission. For example, in the fall of 2001, the Director of the FBI established new positions responsible for strengthening information sharing and coordination with state and local law enforcement agencies.

The FBI Director recently announced the second phase of the reorganization, under which significant resources will be committed to preventing terrorist attacks, pending congressional approval. The plan increases the FBI’s counterterrorism investigative capabilities and flexibility by shifting hundreds of field agents from criminal investigations to counterterrorism investigations and activities. At the same time, this shift allows each field office to meet national programmatic objectives for the FBI’s highest priority—preventing terrorist attacks within the United States.

The plan also seeks to build within the FBI a concentrated, national, centralized, and deployable expertise on terrorism issues. This requires both ensuring that information and knowledge in the field offices gets relayed to headquarters and creating expertise that can be easily accessed by and deployed to field offices. In order to respond to the need for a more flexible and mobile deployment of highly knowledgeable counterterrorism agents, the FBI plans to devote a portion of the increased personnel to “Flying Squads.” These squads, consisting of agents with specific counterterrorism expertise, will travel to field offices when their expertise is needed, and will bring valuable information back to FBI headquarters for analysis. Reflecting the global nature of the terrorist reality, the “Flying Squads” will also be deployed overseas when necessary. In addition, the FBI will augment its overseas presence and partnerships by increasing the number of Legal Attaches around the world, who will fall under the authority of our Ambassadors.

The plan also includes the establishment of a new, expansive multi-agency National Joint Terrorism Task Force at FBI Headquarters that will complement the Joint Terrorism Task Forces established in local FBI

field offices and improve collaboration and information sharing with other agencies. (See *Intelligence and Warning* chapter for additional discussion on FBI restructuring.)

Target and attack terrorist financing. A cornerstone of our counterterrorism effort is a concerted interagency effort to target and interdict financing of terrorist operations. The FBI's Financial Review Group and Operation Green Quest at the U.S. Customs Service, proposed to be a component of the Department of Homeland Security, have spearheaded the enforcement component of the terrorist finance interdiction effort. The Review Group is a multi-agency effort led by the FBI to investigate suspicious financial transactions in order to uncover and prosecute terrorist financing and develop predictive models to help identify future illegal financing. Operation Green Quest, launched by the Department of Treasury at the Customs Service, works to freeze the accounts of, and seize the assets of, individuals and organizations that finance terrorist groups. Going forward, the FBI should lead the federal government law enforcement campaign against

terrorist financing, with support from the Department of Homeland Security.

Track foreign terrorists and bring them to justice. The federal government has two key missions in regard to tracking foreign terrorists: barring terrorists or terrorist-supporting aliens from the United States and tracking down and deporting any who have illegally entered our country. The Foreign Terrorist Tracking Task Force at the Department of Justice currently performs this function. The Task Force is also charged with facilitating coordination and communication among the agencies with immigration and enforcement responsibilities.

Protecting Critical Infrastructures and Key Assets

Terrorists are opportunistic. They exploit vulnerabilities we leave exposed, choosing the time, place, and method of attack according to the weaknesses they observe or perceive. Increasing the security of a particular type of target, such as aircraft or buildings, makes it more likely that terrorists will seek a different target. Increasing the countermeasures to a particular terrorist tactic, such as hijacking, makes it more likely that terrorists will favor a different tactic.

Protecting America's critical infrastructure and key assets is thus a formidable challenge. Our open and technologically complex society presents an almost infinite array of potential targets, and our critical infrastructure changes as rapidly as the marketplace. It is impossible to protect completely all targets, all the time. On the other hand, we can help deter or deflect attacks, or mitigate their effects, by making strategic improvements in protection and security. Thus, while

we cannot assume we will prevent all terrorist attacks, we can substantially reduce America's vulnerability, particularly to the most damaging attacks.

All elements of our society have a crucial stake in reducing our vulnerability to terrorism; and all have highly valuable roles to play. Protecting America's critical infrastructure and key assets requires an unprecedented level of cooperation throughout all levels of government—with private industry and institutions, and with the American people. The federal government has the crucial task of fostering a collaborative environment, and enabling all of these entities to work together to provide America the security it requires.

What must we protect? The USA PATRIOT Act defines critical infrastructure as those "systems and assets, whether physical or virtual, so vital to the

United States that the incapacity or destruction of such systems and assets would have a debilitating impact on security, national economic security, national public health or safety, or any combination of those matters.” Our critical infrastructures are particularly important because of the functions or services they provide to our country. Our critical infrastructures are also particularly important because they are complex systems: the effects of a terrorist attack can spread far beyond the direct target, and reverberate long after the immediate damage.

America’s critical infrastructure encompasses a large number of sectors. Our agriculture, food, and water sectors, along with the public health and emergency services sectors, provide the essential goods and services Americans need to survive. Our institutions of government guarantee our national security and freedom, and administer key public functions. Our defense industrial base provides essential capabilities to help safeguard our population from external threats. Our information and telecommunications sector enables economic productivity and growth, and is particularly important because it connects and helps control many other infrastructure sectors. Our energy, transportation, banking and finance, chemical industry, and postal and shipping sectors help sustain our economy and touch the lives of Americans everyday.

Critical Infrastructure Sectors

Agriculture

Food

Water

Public Health

Emergency Services

Government

Defense Industrial Base

Information and Telecommunications

Energy

Transportation

Banking and Finance

Chemical Industry

Postal and Shipping

The assets, functions, and systems within each critical infrastructure sector are not equally important. The transportation sector is vital, but not every bridge is critical to the Nation as a whole. Accordingly, the federal government will apply a consistent methodology to focus its effort on the highest priorities, and the federal budget will differentiate resources required for critical infrastructure protection from resources required for other important protection activities. The federal government will work closely with state and local governments to develop and apply compatible approaches to ensure protection for critical assets, systems, and functions at all levels of society. For example, local schools, courthouses, and bridges are critical to the communities they serve.

Protecting America’s critical infrastructure and key assets requires more than just resources. The federal government can use a broad range of measures to help enable state, local, and private sector entities to better protect the assets and infrastructures they control. For example, the government can create venues to share information on infrastructure vulnerabilities and best-practice solutions, or create a more effective means of providing specific and useful threat information to non-federal entities in a timely fashion.

In addition to our critical infrastructure, our country must also protect a number of key assets—individual targets whose destruction would not endanger vital systems, but could create local disaster or profoundly damage our Nation’s morale or confidence. Key assets include symbols or historical attractions, such as prominent national, state, or local monuments and icons. In some cases, these include quasi-public symbols that are identified strongly with the United States as a Nation, and fall completely under the jurisdiction of state and local officials or even private foundations. Key assets also include individual or localized facilities that deserve special protection because of their destructive potential or their value to the local community.

Finally, certain high-profile events are strongly coupled to our national symbols or national morale and deserve special protective efforts by the federal government.

National Vision

The United States will forge an unprecedented level of cooperation throughout all levels of government, with private industry and institutions, and with the American people to protect our critical infrastructure and key assets from terrorist attack. Our country will continue to take immediate and decisive action to protect assets and systems that could be attacked with catastrophic consequences. We will establish a single office within the Department of Homeland Security to work with the federal departments and agencies, state and local governments, and the private sector to implement a comprehensive national plan to protect critical infrastructure and key assets. The national infrastructure protection plan will organize the complementary efforts of government and private institutions to raise security over the long term to levels appropriate to each target's vulnerability and criticality. The federal government will work to create an environment in which state, local, and private entities can best protect the infrastructure they control. The Department of Homeland Security will develop the best modeling and simulation tools to understand how our increasingly complex and connected infrastructures behave, and to shape effective protection and response options. The Department of Homeland Security will develop and coordinate implementation of tiered protective measures that can be tailored to the target and rapidly adjusted to the threat. The Department of Homeland Security, working through the Department of State, will foster international cooperation to protect shared and interconnected infrastructure.

Major Initiatives

Unify America's infrastructure protection effort in the Department of Homeland Security. Our country requires a single accountable official to ensure we address vulnerabilities that involve more than one infrastructure sector or require action by more than one agency. Our country also requires a single accountable official to assess threats and vulnerabilities comprehensively across all infrastructure sectors to ensure we reduce the overall risk to our country, instead of inadvertently shifting risk from one potential set of targets to another. Under the President's proposal, the Department of Homeland Security will assume respon-

sibility for integrating and coordinating federal infrastructure protection responsibilities.

The Department of Homeland Security would consolidate and focus the activities performed by the Critical Infrastructure Assurance Office (currently part of the Department of Commerce) and the National Infrastructure Protection Center (FBI), less those portions that investigate computer crime. The Department would augment those capabilities with the Federal Computer Incident Response Center (General Services Administration), the Computer Security Division of the National Institute of Standards and Technology (Commerce), and the National Communications System (Defense).

The Department of Homeland Security would also unify the responsibility for coordinating cyber and physical infrastructure protection efforts. Currently, the federal government divides responsibility for cyber and physical infrastructure, and key cyber security activities are scattered in multiple departments. While securing cyberspace poses unique challenges and issues, requiring unique tools and solutions, our physical and cyber infrastructures are interconnected. The devices that control our physical systems, including our electrical distribution system, transportation systems, dams, and other important infrastructure, are increasingly connected to the Internet. Thus, the consequences of an attack on our cyber infrastructure can cascade across many sectors. Moreover, the number, virulence, and maliciousness of cyber attacks have increased dramatically in recent years. Accordingly, under the President's proposal, the Department of Homeland Security will place an especially high priority on protecting our cyber infrastructure.

Reducing America's vulnerability to terrorism must also harness the coordinated effort of many federal departments and agencies that have highly specialized expertise and long-standing relationships with industry. For example, the Treasury Department chairs the Financial and Banking Information Infrastructure Committee, which brings together several federal agencies and the private sector to focus on issues related to the financial services industry. Each of the critical infrastructure sectors has unique characteristics, hence posing unique security challenges. The Department of Homeland Security would coordinate the activities of the federal departments and agencies to address the unique security challenges of each infrastructure sector. The following chart depicts the federal government's organization for protecting America's infrastructure and key assets, and indicates the departments and agencies that have primary responsibility for interacting with particular critical infrastructure sectors.

Federal Government Organization to Protect Critical Infrastructure and Key Assets

President

Secretary of Homeland Security

Federal, state, local, and private sector coordination and integration
Comprehensive national infrastructure protection plan
Mapping threats to vulnerabilities and issuing warnings

Sector	Lead Agency
Agriculture	Department of Agriculture
Food:	
<i>Meat and poultry</i>	Department of Agriculture
<i>All other food products</i>	Department of Health & Human Services
Water	Environmental Protection Agency
Public Health	Department of Health & Human Services
Emergency Services	Department of Homeland Security
Government:	
<i>Continuity of government</i>	Department of Homeland Security
<i>Continuity of operations</i>	All departments and agencies
Defense Industrial Base	Department of Defense
Information and Telecommunications	Department of Homeland Security
Energy	Department of Energy
Transportation	Department of Homeland Security*
Banking and Finance	Department of the Treasury
Chemical Industry and Hazardous Materials	Environmental Protection Agency
Postal and Shipping	Department of Homeland Security
National Monuments and Icons	Department of the Interior

* Under the President's proposal, the Transportation Security Administration, responsible for securing our Nation's transportation systems, will become part of the Department of Homeland Security. The new Department will coordinate closely with the Department of Transportation, which will remain responsible for transportation safety.

Build and maintain a complete and accurate assessment of America's critical infrastructure and key assets. The Department of Homeland Security must be able to translate threat information into appropriate action in the shortest possible time, a critical factor in preventing or mitigating attacks, particularly those involving weapons of mass destruction. Accordingly, the Department would build and maintain a complete, current, and accurate assessment of vulnerabilities and preparedness of critical targets across critical infrastructure sectors. The Department would thus have a crucial capability that does not exist in our government today: the ability to continuously evaluate threat information against our current vulnerabilities, inform the President, issue warnings, and effect action accordingly. As noted in the *Intelligence and Warning* chapter, the Department would augment this unique capability with "red team" techniques to view our vulnerabilities from the perspective of terrorists, and to provide objective data on which to base infrastructure protection standards and performance measures.

A complete and thorough assessment of America's vulnerabilities will not only enable decisive near-term action, but guide the rational long-term investment of effort and resources. For example, a comprehensive assessment of vulnerabilities and threats can help determine whether to invest in permanent, physical "hardening" of a target, or in maintaining a reserve of personnel and equipment that can meet a temporary "surge" requirement for increased security.

Enable effective partnership with state and local governments and the private sector. Government at the federal, state, and local level must actively collaborate and partner with the private sector, which controls 85 percent of America's infrastructure. Private firms bear primary and substantial responsibility for addressing the public safety risks posed by their industries—protecting a firm's assets and systems is a matter of sound corporate governance. In many cases private firms, not the government, possess the technical expertise and means to protect the infrastructure they control. Government at all levels must enable, not inhibit, the private sector's ability to carry out its protection responsibilities. The Nation's infrastructure protection effort must harness the capabilities of the private sector to achieve a prudent level of security without hindering productivity, trade, or economic growth.

The Department of Homeland Security would give state and local agencies and the private sector one primary contact instead of many for coordinating protection activities with the federal government, including vulnerability assessments, strategic planning efforts, and exercises. The Department would include

an office which reports directly to the Secretary dedicated to this function, and would build on current outreach efforts of existing federal agencies with infrastructure protection responsibilities.

When the Department of Homeland Security learns of a potential threat to our critical infrastructure, it must not only disseminate warnings quickly, but must rapidly map those threats against an accurate assessment of our country's vulnerabilities and effect appropriate action. To ensure this, the government must facilitate and encourage private firms to share important information about the infrastructure they control. Private firms should have reasonable assurance that good faith disclosures about vulnerabilities and preparedness do not expose the firm to liability, drops in share value, loss of competitive advantage, or antitrust action. As discussed in the *Law* chapter, the Attorney General will convene a panel to propose any legal changes necessary to enable sharing of essential homeland security related information between the government and the private sector.

Develop a national infrastructure protection plan. The Department of Homeland Security would develop and coordinate implementation of a comprehensive national plan to protect America's infrastructure from terrorist attack. The plan will build on the baseline physical and cyber infrastructure protection plans which the Office of Homeland Security and the President's Critical Infrastructure Protection Board will release by the end of Fiscal Year 2002. The national plan will provide a methodology for identifying and prioritizing critical assets, systems, and functions, and for sharing protection responsibility with state and local government and the private sector. The plan will establish standards and benchmarks for infrastructure protection, and provide a means to measure performance. The plan will inform the Department of Homeland Security's annual process for planning, programming, and budgeting of critical infrastructure protection activities, including research and development.

As discussed in the *Costs of Homeland Security* chapter, the national infrastructure protection plan will also provide an approach for rationally balancing the costs and benefits of increased security according to the threat—to help answer, in effect, "how much protection is enough?" The plan will describe how to use all available policy instruments to raise the security of America's critical infrastructure and key assets to a prudent level, relying to the maximum possible extent on the market to provide appropriate levels of security. The Department would manage federal grant programs for homeland security, which may be used to assist state and local infrastructure protection efforts. In some

cases, the Department may seek legislation to create incentives for the private sector to adopt security measures or invest in improved safety technologies. In other cases, the federal government will need to rely on regulation—for example, to require commercial airlines to electronically transmit passenger manifests on international flights, or to require permits for intrastate purchase of explosives.

Securing cyberspace. The cost to our economy from attacks on our information systems has grown by 400 percent in four years according to one estimate, but is still limited. In one day, however, that could change. Every day somewhere in America an individual company or a home computer user suffers what for them are significantly damaging or catastrophic losses from cyber attacks. The ingredients are present for that kind of damage to occur on a national level, to our national networks and the systems they run upon, on which the nation depends. Our potential enemies have the intent; the tools of destruction are broadly available; the vulnerabilities of our systems are myriad and well-known. In cyberspace, a single act can inflict damage in multiple locations simultaneously without the attacker ever having physically entered the United States.

Accordingly, the President acted quickly following the terrorist attacks in September to secure our information and telecommunications infrastructure. The President created the Critical Infrastructure Protection Board and launched a public-private partnership to create a *National Strategy to Secure Cyberspace*. The *National Strategy to Secure Cyberspace* will provide a roadmap to empower all Americans to secure the part of cyberspace they control, including a variety of new proposals aimed at five levels: the home user and small business; large enterprises; sectors of the economy; national issues; and global issues.

Thousands of citizens all across the country have contributed to the effort by contributing their views in Town Hall meetings, on interactive web sites, or by participating in one of the dozens of participating groups and associations. State and local governments and state and local law enforcement have also united to prepare their own cyber security strategies.

Harness the best analytic and modeling tools to develop effective protective solutions. As discussed in the *Intelligence and Warning* chapter, responding to threat information requires life-or-death decisions that must often be made in conditions of great uncertainty. High-end modeling and simulation tools can greatly enhance our ability to quickly make those decisions based on the best possible understanding of their consequences.

State-of-the-art modeling and simulation provides another important tool for determining what assets, systems, and functions are “critical,” a process that involves many factors that interact with one another in complex ways. For example, an attack on a key Internet node might cause few casualties directly, but could trigger cascading effects across many infrastructure sectors, causing widespread disruption to the economy and imperiling public safety. An attack on a major port could inflict damage that affects transportation, energy, and economic infrastructure nationwide. A chemical attack would have little effect on an empty stadium; a catastrophic effect on a stadium filled with tens of thousands of spectators. Protecting America’s critical infrastructure thus requires that we determine the highest risks based on the best possible understanding of these factors, and prioritize our effort accordingly. The Department of Homeland Security would develop and harness the best modeling, simulation, and analytic tools to evaluate the full range of relevant factors and the complex manner in which they interact. The Department would take as its foundation the National Infrastructure Simulation and Analysis Center (currently part of the Department of Energy).

Guard America’s critical infrastructure and key assets against “inside” threats. The “insider threat” and personnel reliability are increasingly serious concerns for protecting critical infrastructure. In the food processing and distribution industry, disgruntled or former employees have caused nearly all previous incidents of food tampering, providing a glimpse of what terrorists with insider access might accomplish. Personnel with privileged access to critical infrastructure, particularly control systems, may serve as terrorist surrogates by providing information on vulnerabilities, operating characteristics, and protective measures. These “insiders” can also provide access to sensitive areas, such as loading docks, control centers, and airport tarmacs. The U.S. government, working through the Department of Homeland Security will undertake a comprehensive review of critical infrastructure personnel surety programs and propose national standards for screening and background checks. To this end, the Secretary of Homeland Security and the Attorney General will convene a panel with appropriate representatives from federal, state, and local government, in consultation with the private sector, to examine whether employer liability statutes and privacy concerns hinder necessary background checks of personnel with access to critical infrastructure facilities or systems. The Department of Homeland Security would also undertake a comprehensive review of other protection measures necessary to deny terrorist access to critical infrastructure—for example, establishing “security zones” and controlling access around

vulnerable port facilities much as we control access at airports.

Partner with the international community to protect our transnational infrastructure. We share much of our critical infrastructure with our neighbors in Canada and Mexico, and increasingly with countries around the world. Our electricity transmission, natural gas and petroleum pipelines are part of a vast, interconnected system that serves not only the United States, but Canada and Mexico as well. America's seaports often contain dense concentrations of population and critical

infrastructure assets and systems while sustaining an ever-increasing volume of trade with ports around the globe. Thus, terrorists need not gain access to our territory to attack our infrastructure. The Administration is establishing joint steering committees with both Canada and Mexico to improve the security of critical physical and cyber infrastructure, and is actively pursuing necessary international cooperation to increase the security of global transportation systems and commerce.

Defending against Catastrophic Threats

The expertise, technology, and material needed to build the most deadly weapons known to mankind—including chemical, biological, radiological, and nuclear weapons—are proliferating. If our enemies acquire these weapons, they are likely to try to use them. The consequences of such an attack could be far more devastating than those we suffered on September 11—a chemical, biological, radiological, or nuclear terrorist attack in the United States could cause large numbers of casualties, mass psychological disruption, and contamination, and could overwhelm local medical capabilities.

Currently, chemical, biological, radiological, and nuclear detection capabilities are modest and response capabilities are dispersed throughout the country at every level of government. Responsibility for chemical,

biological, radiological, and nuclear surveillance as well as for initial response efforts often rests with state and local hospitals and public health agencies. Today, if a natural disaster or terrorist attack causes medical consequences that exceed local and state capabilities, the Department of Health and Human Services would coordinate the deployment of medical personnel, equipment, and pharmaceuticals among the Departments of Agriculture, Defense, Energy, Justice, Transportation, Veterans Affairs, the Environmental Protection Agency, the Federal Emergency Management Agency, General Services Administration, National Communications System, U.S. Postal Service, and the American Red Cross.

While the government's collaborative arrangements have proven adequate for a variety of natural disasters,

the threat of terrorist attacks using chemical, biological, radiological, or nuclear weapons with potentially catastrophic consequences demands new approaches, a focused strategy, and a new organization. Our country has already expanded capabilities and improved coordination among federal agencies, but more can be done to prepare and respond.

National Vision

America will have a coordinated national effort to prepare for, prevent, and respond to chemical, biological, radiological, and nuclear terrorist threats to the homeland. We will seek to detect chemical, biological, radiological, or nuclear weapons and prevent their entry into the United States. If terrorists use chemical, biological, radiological, or nuclear weapons, our communities and emergency personnel will be organized, trained, and equipped to detect and identify dangerous agents, respond rapidly, treat those who are harmed, contain the damage, and decontaminate the area. Our Nation will consolidate and synchronize the disparate efforts of multiple federal entities currently scattered across several departments. Under the President's proposal, the Department of Homeland Security will unify much of the federal government's efforts to develop and implement scientific and technological countermeasures against human, animal, and plant diseases that could be used as terrorist weapons. The Department would sponsor and establish national priorities for research, development, and testing to develop new vaccines, antidotes, diagnostics, therapies and other technologies against chemical, biological, radiological, or nuclear terrorism; to recognize, identify, and confirm the occurrence of an attack; and to minimize the morbidity and mortality caused by such an attack. In addition, the federal government will set standards and guidelines for state and local chemical, biological, radiological, and nuclear preparedness and response efforts.

Major Initiatives

Prevent terrorist use of nuclear weapons through better sensors and procedures. Our top scientific priority must be preventing terrorist use of nuclear weapons. Under the President's proposal, the Department of Homeland Security will implement a new system of procedures and technologies to detect and prevent the transport of

nuclear explosives toward our borders and into the United States. The Department of Homeland Security would develop and deploy new inspection procedures and detection systems against the entry of such materials at all ports of entry in the United States and at major overseas cargo loading facilities. The Department—in cooperation with the Department of Transportation, state and local governments, and the private sector—would develop additional inspection procedures and detection systems throughout our national transportation structure to detect the movement of nuclear materials within the United States. It will also initiate and sustain research and development efforts aimed at new and better passive and active detection systems.

The Departments of State, Energy, and Defense are already working with foreign states possessing nuclear programs to ensure continued strict security for the global inventory of nuclear weapons and materials, consistent with domestic and international legal obligations (including the Treaty on Non-Proliferation of Nuclear Weapons). These Departments will also work with foreign governments to improve their capabilities to detect the movement of nuclear materials or weapons and to respond appropriately. They will work with foreign governments, for example, to assess their need for enhanced radiation detection capabilities at borders, seaports, and airports and, where appropriate, will coordinate the provision of detection equipment to countries where the threat from the movement of nuclear weapons and materials is significant.

Detect chemical and biological materials and attacks. The federal government, with due attention to constraints such as the need for low operating costs, will develop sensitive and highly selective systems that detect the release of biological or chemical agents. The Environmental Protection Agency, for example, is evaluating the upgrading of air monitoring stations to allow for the detection of certain chemical, biological, or radiological substances. The federal government will also explore systems that can detect whether an individual has been immunized against a threat pathogen or has recently handled threat materials.

The ability to quickly recognize and report biological and chemical attacks will minimize casualties and enable first responders to treat the injured effectively. Local emergency personnel and health providers must first be able to diagnose symptoms. In addition to existing state laws mandating the reporting of threat diseases by physicians, veterinarians, and public health laboratories, rapid diagnosis of diseases of concern and communication form the cornerstone of a robust response. The Department of Homeland Security,

under the President's proposal, will improve infectious disease and chemical terrorism surveillance by working with the Centers for Disease Control and Prevention (CDC) and the Department of Veterans Affairs in concert with local and state public health jurisdictions. These entities will work to develop a national system to detect biological and chemical attacks. This system will include a public health surveillance system to monitor public and private databases for indicators of biological or chemical attack. National research efforts will pay particular attention to recognizing harmful dual-use industrial chemicals.

The CDC will continue its vital role in detecting, diagnosing, and addressing bioterrorist threats. Its Epidemic Intelligence Service will be expanded and modernized to better train local and state officials in recognizing biological attacks. Under the President's proposal, the Department of Homeland Security will also provide resources to state and local jurisdictions with a population of 500,000 or more to hire skilled epidemiologists. The recently established Epidemic Information Exchange System will allow the sharing of disease information in a secure information system. Public health databases will be linked nationwide through the National Electronic Disease Surveillance System to recognize patterns of disease occurrence and to identify potential regional or national outbreaks. The Laboratory Response Network will improve laboratory technology and infrastructure to increase the speed and precision of diagnoses and confirmation of biological attacks. The Department would build the capacity to gather data from all these systems and sensors, quickly assess the extent of any attack, and recommend response options to policymakers.

The Department of Homeland Security, working with the Department of Agriculture, would also strengthen our parallel system for monitoring agricultural outbreaks. Since animals can serve as important sentinels signaling a biological attack against humans or be targets themselves, the Department of Homeland Security would collaborate closely with the Department of Agriculture and the Food and Drug Administration's Food and Animal Health program.

Improve chemical sensors and decontamination techniques. Private industry and the military routinely use sensors that can detect and identify toxic chemicals. Sensors with medical applications have also reached the market. Affordable, accurate, compact, and dependable sensors, however, are not available. The Department of Homeland Security would therefore fund and coordinate a national research program to develop, test, and field detection devices and networks that provide immediate and accurate warnings. The Department would also support research into decontamination

technologies and procedures. As discussed in the *Emergency Preparedness and Response* chapter, the Department of Homeland Security and the Environmental Protection Agency would require assessment technologies to determine when to permit individuals to re-enter buildings and areas.

Develop broad spectrum vaccines, antimicrobials and antidotes. In many cases, our medical countermeasures cannot address all possible biological agents or may not be suitable for use by the general population. The Departments of Health and Human Services and Homeland Security, and other government and private research entities, will pursue new defenses that will increase efficacy while reducing side effects. For example, they will explore the utility of attenuated smallpox vaccines and of existing antivirals modified to render those vaccines more effective and safe. Furthermore, the federal government, in collaboration with the private sector, will research and work toward development of broad spectrum antivirals to meet the threat of engineered pathogens aimed at both humans and livestock.

Short- and long-term efforts will expand the inventory of diagnostics, vaccines, and other therapies such as antimicrobials and antidotes that can mitigate the consequences of a chemical, biological, radiological, or nuclear attack. Development of safer smallpox vaccines and antiviral drugs will lower the risk of adverse reactions experienced with the traditional vaccine. The goal of protecting a diverse population of all ages and health conditions requires a coordinated national effort with a comprehensive research and development strategy and investment plans.

Harness the scientific knowledge and tools to counter terrorism. We will harness America's resources to fight against the most pressing chemical, biological, radiological, or nuclear challenges. In consultation with the Department of Health and Human Services, the Department of Homeland Security would leverage the expertise of America's cutting-edge medical and biotechnological infrastructure to advance the state of knowledge in infectious disease prevention and treatment, forensic epidemiology, and microbial forensics. Substantial research into relevant medical sciences is necessary to better detect, diagnose, and treat the consequences of chemical, biological, radiological, or nuclear attacks. The President has proposed a National Biological Weapons Analysis Center in the Department of Homeland Security to address some of these issues and conduct risk assessments. This Center, with input from the public health sector, will identify the highest priority threat agents to determine which countermeasures require priority research and development. The federal government will also consider and

address the potential impact of genetic engineering on the biological threat.

The Food and Drug Administration (FDA) ensures the availability of medical products (drugs, vaccines, and devices) in the event of the intentional use of chemical, biological, radiological, or nuclear agents. Recently, the FDA adjusted its new drug and biological product regulations so that certain human drugs designed for emergency responses can be quickly introduced based on animal rather than human tests.

Implement the Select Agent Program. Research laboratories can also counter bioterrorism through prevention, and by tracking and securing dangerous biological agents. Under the President's proposal, the

Department of Homeland Security will oversee the Select Agent Program to regulate the shipment of certain hazardous biological organisms and toxins. Through the registration of more than 300 laboratories, the Select Agent Program has significantly increased oversight and security of pathogens that could be used for bioterrorism. The CDC is also training public health officials in every state to assist in accurately interpreting biosafety containment provisions and select agent procedures.

Emergency Preparedness and Response

We must prepare to minimize the damage and recover from any future terrorist attacks that may occur despite our best efforts at prevention. Past experience has shown that preparedness efforts are key to providing an effective response to major terrorist incidents and natural disasters. Therefore, we need a comprehensive national system to bring together and command all necessary response assets quickly and effectively. We must equip, train, and exercise many different response units to mobilize for any emergency without warning. Under the President's proposal, the Department of Homeland Security, building on the strong foundation already laid by the Federal Emergency Management Agency (FEMA), will lead our national efforts to create and employ a system that will improve our response to all disasters, both manmade and natural.

Many pieces of this national emergency response system are already in place. America's first line of defense in the aftermath of any terrorist attack is its first responder community—police officers, firefighters, emergency medical providers, public works personnel, and emergency management officials. Nearly three million state and local first responders regularly put their lives on the line to save the lives of others and make our country safer. These individuals include specially trained hazardous materials teams, collapse search and rescue units, bomb squads, and tactical units.

In a serious emergency, the federal government augments state and local response efforts. FEMA, which under the President's proposal will be a key component of the Department of Homeland Security, provides funding and command and control support. A

number of important specialized federal emergency response assets that are housed in various departments would also fall under the Secretary of Homeland Security's authority for responding to a major terrorist attack. Because response efforts to all major incidents entail the same basic elements, it is essential that federal response capabilities for both terrorist attacks and natural disasters remain in the same organization. This would ensure the most efficient provision of federal support to local responders by preventing the proliferation of duplicative "boutique" response entities.

Americans respond with great skill and courage to emergencies. There are, however, too many seams in our current response plans and capabilities. Today, at least five different plans—the Federal Response Plan, the National Contingency Plan, the Interagency Domestic Terrorism Concept of Operations Plan, the Federal Radiological Emergency Response Plan, and a nascent bioterrorism response plan—govern the federal government's response. These plans and the government's overarching policy for counterterrorism are based on a distinction between "crisis management" and "consequence management." In addition, different organizations at different levels of the government have put in place different incident management systems and communications equipment. All too often, these systems and equipment do not function together well enough.

We will enhance our capabilities for responding to a terrorist attack all across the country. Today, many geographic areas have little or no capability to respond to a terrorist attack using weapons of mass destruction. Even the best prepared states and localities do not possess adequate resources to respond to the full range of terrorist threats we face. Many do not yet have in place mutual aid agreements to facilitate cooperation with their neighbors in time of emergency. Until recently, federal support for domestic preparedness efforts has been relatively small and disorganized, with eight different departments and agencies providing money in a tangled web of grant programs.

National Vision

We will strive to create a fully integrated national emergency response system that is adaptable enough to deal with any terrorist attack, no matter how unlikely or catastrophic, as well as all manner of natural disasters. Under the President's proposal, the Department of Homeland Security will consolidate federal response plans and build a national system for incident management. The Department would aim to ensure that leaders at all levels of

government have complete incident awareness and can communicate with and command all appropriate response personnel. Our federal, state, and local governments would ensure that all response personnel and organizations—including the law enforcement, military, emergency response, health care, public works, and environmental communities—are properly equipped, trained, and exercised to respond to all terrorist threats and attacks in the United States.

Major Initiatives

Integrate separate federal response plans into a single all-discipline incident management plan. Under the President's proposal, the Department of Homeland Security will consolidate existing federal government emergency response plans into one genuinely all-discipline, all-hazard plan—the Federal Incident Management Plan—and thereby eliminate the "crisis management" and "consequence management" distinction. This plan would cover all incidents of national significance, including acts of bioterrorism and agroterrorism, and clarify roles and expected contributions of various emergency response bodies at different levels of government in the wake of a terrorist attack.

The Department of Homeland Security would provide a direct line of authority from the President through the Secretary of Homeland Security to a single on-site federal coordinator. The single federal coordinator would be responsible to the President for coordinating the entire federal response. Lead agencies would maintain operational control over their functions (for example, the FBI will remain the lead agency for federal law enforcement) in coordination with the single on-site federal official. The Department would direct the Domestic Emergency Support Team, nuclear incident response teams, National Pharmaceutical Stockpile, and National Disaster Medical System, as well as other assets.

Create a national incident management system. Under the President's proposal, the Department of Homeland Security, working with federal, state, local, and non-governmental public safety organizations, will build a comprehensive national incident management system to respond to terrorist incidents and natural disasters. The Department would ensure that this national system defines common terminology for all parties, provides a unified command structure, and is scalable to meet incidents of all sizes.

The federal government will encourage state and local first responder organizations to adopt the already

widespread Incident Management System by making it a requirement for federal grants. All state and local governments should create and regularly update their own homeland security plans, based on their existing emergency operations plans, to provide guidance for the integration of their response assets in the event of an attack. The Department of Homeland Security will, under the President's proposal, provide support (including model plans) for these efforts and will adjust the Federal Incident Management Plan as necessary to take full advantage of state and local capabilities. State and local governments should also sign mutual aid agreements to facilitate cooperation with their neighbors in time of emergency. Starting in Fiscal Year 2004, the Department would provide grants in support of such efforts.

Improve tactical counterterrorist capabilities. With advance warning, we have various federal, state, and local response assets that can intercede and prevent terrorists from carrying out attacks. These include law enforcement, emergency response, and military teams. In the most dangerous of incidents, particularly when terrorists have chemical, biological, radiological, or nuclear weapons in their possession, it is crucial that the individuals who preempt the terrorists do so flawlessly, no matter if they are part of the local SWAT team or the FBI's Hostage Rescue Team. It is also crucial that these individuals be prepared and able to work effectively with each other and with other specialized response personnel. Finally, these teams and other emergency response assets must plan and train for the consequences of failed tactical operations.

The Department of Homeland Security, as the lead federal agency for incident management in the United States, will, under the President's plan, establish a program for certifying the preparedness of all civilian teams and individuals to execute and deal with the consequences of such counterterrorist actions. As part of this program, the Department would provide partial grants in support of joint exercises between its response assets and other government teams. (This program would be voluntary for assets outside of the Department of Homeland Security.)

Enable seamless communication among all responders. In the aftermath of any major terrorist attack, emergency response efforts would likely involve hundreds of offices from across the government and the country. It is crucial for response personnel to have and use equipment, systems, and procedures that allow them to communicate with one another. Under the President's proposal, the Department of Homeland Security will work with state and local governments to achieve this goal.

In particular, the Department would develop a national emergency communication plan to establish protocols (i.e., who needs to talk to whom), processes, and national standards for technology acquisition. The Department would, starting with Fiscal Year 2003 funds, tie all federal grant programs that support state and local purchase of terrorism-related communications equipment to this communication plan and require all applicants to demonstrate progress in achieving interoperability with other emergency response bodies.

Prepare health care providers for catastrophic terrorism. Our entire emergency response community must be prepared to deal with all potential hazards, especially those associated with weapons of mass destruction. Under the President's proposal, the Department of Homeland Security, working with the Departments of Health and Human Services and Veterans Affairs, will support training and equipping of state and local health care personnel to deal with the growing threat of chemical, biological, radiological, and nuclear terrorism. It would continue to fund federal grants to states and cities for bioterrorism preparedness. It would use the hospital preparedness grant program to help prepare hospitals and poison control centers to deal specifically with biological and chemical attacks and to expand their surge capacity to care for large numbers of patients in a mass-casualty incident. These efforts would enhance training between public health agencies and local hospitals and seek improved cooperation between public health and emergency agencies at all levels of government.

A major act of biological terrorism would almost certainly overwhelm existing state, local, and privately owned health care capabilities. For this reason, the federal government maintains a number of specialized response capabilities for a bioterrorist attack. The National Disaster Medical System, a federal/private partnership that includes the Departments of Health and Human Services, Defense, Veterans Affairs, and FEMA, provides rapid response and critical surge capacities to support localities in disaster medical treatment. Under the President's proposal, the Department of Homeland Security will assume authority over the System as part of the federal response to incidents of national significance. The System is made up of federal assets and thousands of volunteer health professionals that are organized around the country into a number of specialty teams such as Disaster Medical Assistance Teams, National Medical Response Teams, and teams trained in caring for psychological trauma. In addition, the Department of Veterans Affairs operates a vast health care, training, and pharmaceutical procurement system with facilities in many communities nationwide. The Department of Defense provides specialized skills and transportation

capabilities to move these teams and evacuate casualties.

The Department of Homeland Security, working with the Department of Health and Human Services, would lead efforts to test whether illnesses or complaints may be attributable to chemical, biological, radiological, or nuclear exposure; establish disease/exposure registries; and develop, maintain, and provide information on the health effects of hazardous substances. The Environmental Protection Agency will continue to provide a laboratory diagnostic surge capacity for environmental samples during crises.

Augment America's pharmaceutical and vaccine stockpiles. The National Pharmaceutical Stockpile ensures America's ability to respond rapidly to a bioterrorist attack or a mass casualty incident. This program, which the Department of Homeland Security will operate in consultation with the Department of Health and Human Services under the President's proposal, maintains twelve strategically located "Push Packs" containing 600 tons of antibiotics, antidotes, vaccines, bandages, and other medical supplies. The federal government can transport these packs to an incident site in less than 12 hours for rapid distribution by state and local authorities. This system performed extremely well in the aftermath of the September 11 attacks, delivering a "Push Pack" to New York City in seven hours. Additional deployments followed the anthrax attacks of October 2001.

The National Pharmaceutical Stockpile already contains a sufficient antibiotic supply to begin treatment for 20 million persons exposed to anthrax and should contain enough smallpox vaccine for every American by the end of 2002. The Department of Homeland Security, working with the Department of Health and Human Services, would provide grants to state and local governments to plan for the receipt and distribution of medicines from the Stockpile. In addition, the Departments of Homeland Security and Health and Human Services would pursue accelerated FDA approval of safe and effective products to add to the Stockpile and the development of procedures to accelerate the availability of investigational drugs during a public health emergency.

Prepare for chemical, biological, radiological, and nuclear decontamination. The Department of Homeland Security would ensure the readiness of our first responders to work safely in an area where chemical, biological, radiological, or nuclear weapons have been used. The Department would begin requiring annual certification of first responder preparedness to handle and decontaminate any hazard. This certification process would also verify the ability of state and local

first responders to work effectively with related federal support assets.

Under the President's proposal, the Department of Homeland Security will help state and local agencies meet these certification standards by providing grant money (based on performance) for planning and equipping, training, and exercising first responders for chemical, biological, radiological and nuclear attacks. It would launch a national research and development effort to create new technologies for detection and clean-up of such attacks. After a major incident, the Environmental Protection Agency will be responsible for decontamination of affected buildings and neighborhoods and providing advice and assistance to public health authorities in determining when it is safe to return to these areas.

Plan for military support to civil authorities. The armed forces were an integral part of our national response to the terrorist attacks of September 11. The Department of Defense currently uses a "Total Force" approach to fulfill its missions overseas and at home, drawing on the strengths and capabilities of active-duty, reserve, and National Guard forces. In addition to response from the active-duty forces, Air National Guard fighters took to the air on September 11 to establish combat air patrols. New Jersey and New York guardsmen and Navy and Marine Corps reservists provided medical personnel to care for the injured, military police to assist local law enforcement officials, key asset protection, transportation, communications, logistics, and a myriad of other functions to support recovery efforts in New York City. Maryland Army National Guard military police units were brought on duty and dispatched to provide security at the Pentagon. President Bush asked governors to call up over seven thousand National Guard personnel to supplement security at the Nation's 429 commercial airports. Guardsmen also reinforced border security activities of the Immigration and Nationalization Service and the U.S. Customs Service.

The importance of military support to civil authorities as the latter respond to threats or acts of terrorism is recognized in Presidential decision directives and legislation. Military support to civil authorities pursuant to a terrorist threat or attack may take the form of providing technical support and assistance to law enforcement; assisting in the restoration of law and order; loaning specialized equipment; and assisting in consequence management.

In April 2002, President Bush approved a revision of the Unified Command Plan that included establishing a new unified combatant command, U.S. Northern Command. This Command will be responsible for homeland defense and for assisting civil authorities in

accordance with U.S. law. As in the case with all other combatant commanders, the commander of Northern Command will take all operational orders from and is responsible to the President through the Secretary of Defense. The commander of Northern Command will update plans to provide military support to domestic civil authorities in response to natural and man-made disasters and during national emergencies. The Department of Homeland Security and the Department of Defense would participate as appropriate in homeland security training that involves military and civilian emergency response personnel.

Build the Citizen Corps. Under the President's proposal, the Department of Homeland Security will maintain and expand Citizens Corps, a national program to prepare volunteers for terrorism-related response support. If we can help individual citizens help themselves and their neighbors in the case of a local attack, we will improve our chances to save lives. (See *Organizing for a Secure Homeland* chapter for additional discussion.)

Implement the First Responder Initiative of the Fiscal Year 2003 Budget. Before September 11, the federal government had allocated less than \$1 billion since 1995 to help prepare first responders for terrorist attacks. A range of federal departments provided funding for training and equipment, technical assistance, and other support to assist state and local first responders. These disparate programs were a step in the right direction but fell short in terms of scale and cohesion.

In January 2002, President Bush proposed the First Responder Initiative as part of his Fiscal Year 2003 Budget proposal. The purpose of this initiative is to improve dramatically first responder preparedness for terrorist incidents and disasters. This program will increase federal funding levels more than tenfold (from \$272 million in the pre-supplemental Fiscal Year 2002 Budget to \$3.5 billion in Fiscal Year 2003). Under the President's Department of Homeland Security proposal, the new Department will consolidate all grant programs that distribute federal funds to state and local first responders.

Build a national training and evaluation system. The growing threat of terrorist attacks on American soil, including the potential use of weapons of mass destruction, is placing great strains on our Nation's system for training its emergency response personnel. The Department of Homeland Security will under the President's proposal launch a consolidated and expanded training and evaluation system to meet the increasing demand. This system would be predicated on a four phased approach: requirements, plans, training (and exercises), and assessments (comprising of evaluations and corrective action plans). The

Department would serve as the central coordinating body responsible for overseeing curriculum standards and, through regional centers of excellence such as the Emergency Management Institute in Maryland, the Center for Domestic Preparedness in Alabama, and the National Domestic Preparedness Consortium, for training the instructors who will train our first responders. These instructors would teach courses at thousands of facilities such as public safety academies, community colleges, and state and private universities.

Under the President's proposal, the Department of Homeland Security will establish national standards for emergency response training and preparedness. These standards would provide guidelines for the vaccination of civilian response personnel against certain biological agents. These standards would also require certain coursework for individuals to receive and maintain certification as first responders and for state and local governments to receive federal grants. The Department would establish a national exercise program designed to educate and evaluate civilian response personnel at all levels of government. It would require individuals and government bodies to complete successfully at least one exercise every year. The Department would use these exercises to measure performance and allocate future resources.

Enhance the victim support system. The United States must be prepared to assist the victims of terrorist attacks and their families, as well as other individuals affected indirectly by attacks. Under the President's proposal, the Department of Homeland Security will lead federal agencies and provide guidance to state, local, and volunteer organizations in offering victims and their families various forms of assistance including: crisis counseling, cash grants, low-interest loans, unemployment benefits, free legal counseling, and tax refunds. In the case of a terrorist attack, the Department would coordinate the various federal programs for victim compensation and assistance, including the Department of Justice's Office for Victims of Crime and FEMA's Individual Assistance programs. (See *Costs of Homeland Security* chapter for additional discussion.)

Law

Throughout this Nation's history we have used our laws to promote and safeguard our security and our liberty. The law will both provide mechanisms for the government to act and define the appropriate limits of that action. The President, recognizing this, directed the Office of Homeland Security to review state and federal legal authorities pertinent to homeland security.

We have already taken important steps to protect our homeland. The USA PATRIOT Act, signed into law by the President on October 26, 2001, has improved government coordination in law enforcement, intelligence gathering, and information-sharing. The Aviation and Transportation Security Act, which established the Transportation Security Administration, has strengthened civil aviation security. The Enhanced Border Security and Visa Entry Reform Act will reinforce border security systems. Finally, the Public Health Security and Bioterrorism Preparedness and Response Act will better the Nation's ability to prevent, prepare for, and respond to bioterrorism.

But more needs to be done. On June 18, 2002, the President provided Congress with proposed legislation to establish a Department of Homeland Security. This new Cabinet agency would have a single, urgent mission: securing the homeland of America and protecting the American people from terrorism. Yet creation of this department does not in and of itself constitute a sufficient response to the terrorist threat. We must pass complementary legislation to address innate deficiencies in our overall ability to counter terrorism.

Where new legislation at the federal level is necessary to accomplish our counterterrorism goals, we should work carefully to ensure that newly crafted federal laws do not preempt state law unnecessarily or overly federalize counterterrorism efforts. The Tenth Amendment makes clear that each state retains substantial independent power with respect to the general welfare of its populace. States should avail themselves to the

resources and expertise offered by their sister states and federal counterparts.

Informed by these concepts, the *National Strategy for Homeland Security* outlines several legislative actions. This section does not purport to constitute a complete survey of needed legislative changes. Rather, the actions outlined below are initial steps in an ongoing effort to identify legislative reforms and redundancies with respect to homeland security.

National Vision

We are a Nation built on the rule of law, and we will utilize our laws to win the war on terrorism while always protecting our civil liberties. We should use our federal immigration laws and customs regulations to protect our borders and ensure uninterrupted commerce; we should strengthen state codes to protect our public welfare; we should employ local, state, and federal criminal justice systems to prosecute terrorists; and we should engage our partners around the world in countering the global threat of terrorism through treaties and mutually supporting laws. Where we find our existing laws to be inadequate in light of the terrorist threat, we should craft new laws carefully, never losing sight of our strategic purpose for waging this war—to provide security and liberty to our people. We should guard scrupulously against incursions on our freedoms, recognizing that liberty cannot exist in the absence of governmental restraint. As we move forward in the fight, we should refrain from instituting unnecessary laws, as we remain true to our principles of federalism and individual freedom.

Major Initiatives (Federal)

Enable critical infrastructure information sharing. Homeland security officials need quick, complete access to information relevant to the protection of physical and cyber critical infrastructure. We must meet this need by narrowly limiting public disclosure of such information in order to facilitate its voluntary submission without compromising the principles of openness that ensure government accountability. To this end, the Attorney General will convene a panel with representatives of state attorneys general, state governors, state legislators, state law enforcement, the FBI, the Environmental Protection Agency, the

Department of Health and Human Services, and other federal agencies as necessary upon consultation with the Office of Management and Budget, to propose needed legislative reform or guidance regarding statutes governing public disclosure.

Streamline information sharing among intelligence and law enforcement agencies. Homeland security requires improved information sharing between the intelligence community, law enforcement agencies, and government decision-makers. Our current shortcoming in this area stems, in part, from the number of laws, regulations, and guidelines controlling intelligence operations. Congress, with the enactment of the USA PATRIOT Act, took important steps toward identifying and removing some barriers to the exchange of intelligence. The Administration will expand on this initiative by leading a review of all authorities governing the analysis, integrity, and disclosure of intelligence with the aim of improving information sharing through legislative reform while guarding against incursions on liberties.

Expand existing extradition authorities. The war on terrorism is and must be a global effort. Our country must continue to work cooperatively with nations around the world. To that end, the Departments of State and Justice should work with Congress to amend current extradition laws in two respects. First, new legislation should be adopted that would authorize extradition for additional crimes where the United States already has an extradition treaty, but where the treaty applies only to a limited set of crimes. Second, Congress should grant authority to extradite individuals from the United States for serious crimes in the absence of an extradition treaty, on a case-by-case basis with the approval of the Attorney General and the Secretary of State.

Review authority for military assistance in domestic security. Federal law prohibits military personnel from enforcing the law within the United States except as expressly authorized by the Constitution or an Act of Congress. The threat of catastrophic terrorism requires a thorough review of the laws permitting the military to act within the United States in order to determine whether domestic preparedness and response efforts would benefit from greater involvement of military personnel and, if so, how.

Revive the President's reorganization authority. Only Congress can create a new department of government; the President, however, is tasked with running the departments. Recognizing the need for flexible Presidential management authority, Congress in 1932, provided the President with the ability to reorganize the executive branch for the purpose of reducing

expenditures and increasing efficiency. This authority, which has taken various forms over the years, lapsed in 1984. While this Administration's priority is working with Congress to restructure the federal government to create the Department of Homeland Security, reviving the reorganization authority would greatly assist Presidents in years to come to eliminate redundancies within executive agencies and address homeland security more efficiently and economically. Congress should amend Chapter 9 of Title 5 of the U.S. Code to reinvigorate the President's authority to reorganize the executive branch.

Provide substantial management flexibility for the Department of Homeland Security. Terrorists are opportunistic, agile, and driven. In order to respond to them effectively, the Secretary of the new Department of Homeland Security must have the advantage of modern management techniques. Therefore, the Administration's proposed legislation for the Department includes 21st-century approaches to personnel and procurement policies. It also requests broad reorganization authority to enhance operational effectiveness as needed. With these and other flexible practices, the Secretary would have the managerial freedom necessary to accomplish not only the Department's primary mission of homeland security but also the important agency functions it will absorb which are not directly related to homeland security.

Major Initiatives (State)

Given the states' major role in homeland security, and consistent with the principles of federalism inherent to American government, the following initiatives constitute suggestions, not mandates, for state initiatives.

Coordinate suggested minimum standards for state driver's licenses. The licensing of drivers by the 50 states, the District of Columbia, and the United States territories varies widely. There are no national or agreed upon state standards for content, format, or license acquisition procedures. Terrorist organizations, including Al-Qaeda operatives involved in the September 11 attacks, have exploited these differences. While the issuance of driver's licenses falls squarely within the powers of the states, the federal government can assist the states in crafting solutions to curtail the future abuse of driver's licenses by terrorist organizations. Therefore, the federal government, in consultation with state government agencies and non-governmental organizations, should support state-led efforts to develop suggested minimum standards for driver's licenses, recognizing that many states should and will exceed these standards.

Enhance market capacity for terrorism insurance. The need for insurance coverage for terrorist events has increased dramatically. Federal support is clearly critical to a properly functioning market for terrorism insurance; nonetheless, state regulation will play an integral role in ensuring the adequate provision of terrorism insurance. To establish a regulatory approach which enables American businesses to spread and pool risk efficiently, states should work together and with the federal government to find a mutually acceptable approach to enhance market capacity to cover terrorist risk.

Train for prevention of cyber attacks. State and local officials have requested federal training regarding the identification, investigation, and enforcement of cyber-related crimes and terrorism. The FBI, in coordination with other relevant federal organizations, should assist state and local law enforcement in obtaining training in this area.

Suppress money laundering. Terrorists use unregulated financial services, among other means, to fund their operations. The Money Laundering Suppression Act (P.L. 103-325) urges states to enact uniform laws to license and regulate certain financial services. The USA PATRIOT Act also relies on state law to establish the regulatory structure necessary to combat money laundering. States should assess the current status of their regulations regarding non-depository providers of financial services and work to adopt uniform laws as necessary to ensure more efficient and effective regulation. By doing so, states would protect consumers by providing increased stability and transparency to an industry prone to abuse while at the same time providing state and local law enforcement with the tools necessary to dismantle informal and unlicensed money transmission networks.

Ensure continuity of the judiciary. In the aftermath of a terrorist attack, our judicial system must continue to operate effectively. Planning is critical to this continuity. As such, states, relevant non-governmental organizations, and representatives of the Department of Justice and the federal judiciary should convene a committee of representatives to consider the expedient appointment of judges; interaction and coordination among federal and state judiciaries; and other matters necessary to the continued functioning of the judiciary in times of crisis.

Review quarantine authority. State quarantine laws—most of which are over 100 years old—fail to address the dangers presented by modern biological warfare and terrorism. States, therefore, should update quarantine laws to improve intrastate response while working with their sister states and federal regulators

to assure compliance with minimum public health standards. To facilitate this process, the Departments of Homeland Security, Health and Human Services, Justice, and Defense should participate in a review of quarantine statutes and regulations in conjunction with state and local authorities to establish minimum standards. In addition, legislators should provide strong federal, state, and local evacuation authority through appropriate legislation or regulation.

Science and Technology

The Nation's advantage in science and technology is a key to securing the homeland. New technologies for analysis, information sharing, detection of attacks, and countering chemical, biological, radiological, and nuclear weapons will help prevent and minimize the damage from future terrorist attacks. Just as science and technology have helped us defeat past enemies overseas, so too will they help us defeat the efforts of terrorists to attack our homeland and disrupt our way of life.

The Nation needs a systematic national effort to harness science and technology in support of homeland security. Our national research enterprise is vast and complex, with companies, universities, research institutes, and government laboratories of all sizes conducting research and development on a very broad range of issues. Guiding this enterprise to field important new capabilities and focus new efforts in

support of homeland security is a major undertaking. The Department of Homeland Security, which under the President's proposal will serve as the federal government's lead for this effort, will work with private and public entities to ensure that our homeland security research and development are of sufficient size and sophistication to counter the threat posed by modern terrorism.

The private sector has the expertise to develop and produce many of the technologies, devices, and systems needed for homeland security. The federal government needs to find better ways to harness the energy, ingenuity, and investments of private entities for these purposes. Many businesses that could play a role in homeland security research and development are unaccustomed to working with the federal government and some avoid it entirely due to onerous contracting and oversight requirements. In addition, the

government currently has very few programs that solicit research and development proposals focused specifically on developing new homeland security capabilities. The Department of Homeland Security would take the lead in overcoming these obstacles.

The President has proposed to consolidate most of the federal government's homeland security research and development efforts under the coordination of the Department of Homeland Security to ensure strategic direction and avoid duplication. To date, research and development activities in support of homeland security have been underfunded, evolutionary, short-term in nature, fragmented across too many departments, and heavily reliant on spin-offs from the national security and medical sectors. Many of the involved agencies have little frontline knowledge of homeland security and little or no experience in technology acquisition and supporting research. The new Department would be responsible for overcoming these shortfalls by ensuring the pursuit of research and development activities where none existed previously.

The President's Fiscal Year 2003 Budget request proposed a significant increase in homeland security research and development funding: from nearly \$1 billion in Fiscal Year 2002 to about \$3 billion, with the bulk focused on developing new countermeasures to bioterrorism. This is a crucial first federal step for dealing with one of our most pressing scientific challenges. The Department must build on this down payment to create and implement a long-term research and development plan that includes investment in potentially revolutionary capabilities.

National Vision

In the war on terrorism, America's vast science and technology base provides a key advantage. With the Department of Homeland Security as a focal point, the United States will press this advantage through a national research and development enterprise for homeland security similar in emphasis and focus to that which has supported the national security community for more than fifty years. The Department will establish a disciplined system to guide its homeland security research and development efforts and those of other departments and agencies. As a Nation, we will emphasize science and technology applications that address catastrophic threats. We will build on existing science and technology whenever possible. We will embrace science and technology initiatives that can support the whole range of homeland

security actors. We will explore both evolutionary improvements to current capabilities and development of revolutionary new capabilities. The Department of Homeland Security will ensure appropriate testing and piloting of new technologies. Finally, the Department, working with other agencies, will set standards to assist the acquisition decisions of state and local governments and private-sector entities.

Major Initiatives

Develop chemical, biological, radiological, and nuclear countermeasures. The Nation's research and development agenda will prioritize efforts to deal with catastrophic threats. Key initiatives will include research and development to prevent terrorist use of nuclear weapons, detect chemical and biological materials and attacks, develop high-efficacy vaccines and antivirals against biological agents, and track laboratory use of biological agents. (See *Defending against Catastrophic Threats* chapter for additional discussion.)

Develop systems for detecting hostile intent. Terrorism ultimately requires individual human beings to carry out murderous actions. These individuals, whether they intend to commandeer an aircraft, detonate a suicide bomb, or sneak illicit material through customs, may behave in a manner that reveals their criminal intent. The Department of Homeland Security would work with private and public entities to develop a variety of systems that highlight such behavior and can trigger further investigation and analysis of suspected individuals. This would allow security officials at points of interest such as airports and borders to examine more closely individuals who exhibit such characteristics and also have other indications of potentially hostile intent in their background. The Department would also explore whether appropriate sensors can determine whether individuals have been immunized or otherwise exposed to biological agents, chemical agents, or nuclear materials.

Apply biometric technology to identification devices. As our military, intelligence, and law enforcement efforts in Afghanistan and other countries have demonstrated, bringing justice to terrorists and their supporters is complicated by the fact that they hide among innocent civilians and in remote places. Finding terrorists and preventing terrorist attacks here in the United States is difficult for the same reason—for example, a terrorist on the FBI's Watch List may sneak past security personnel at an airport thanks to false documents and a simple disguise. These challenges require new

technologies and systems to identify and find individual terrorists. The Department of Homeland Security would support research and development efforts in biometric technology, which shows great promise. The Department would focus on improving accuracy, consistency, and efficiency in biometric systems. Furthermore, the Department would explore biomolecular and other new techniques, as well as enhancements to current techniques such as noise suppression methods for voice authentication.

Improve the technical capabilities of first responders. If we do not protect our first responders from the dangerous effects of chemical, biological, radiological, and nuclear attacks, we may lose the very people we depend on to minimize the damage of any such attacks. The Department of Homeland Security would launch a steady and long-term effort to provide first responders with technical capabilities for dealing with the effects of catastrophic threats—capabilities that would aid both first responders and victims of the attack. These capabilities would include protective gear and masks, prophylactic treatments, and decontamination equipment. The Department would undertake sustained efforts to develop treatments and decontamination methodologies for radiological and nuclear events. The Department would also focus on developing new methods to merge disparate databases and provide first responders with accurate and usable pictures of building layouts and other key information about the site of a terrorist incident. In all these efforts, the Department would pay great attention to ensuring that these technologies are easy to use under the extreme conditions in which first responders operate.

Coordinate research and development of the homeland security apparatus. The Department of Homeland Security, working with the White House and other federal departments, would set the overall direction for our Nation's homeland security research and development. The Department would establish a management structure to oversee its research and development activities and to guide its interagency coordination activities. It would base these efforts on a constant examination of the Nation's vulnerabilities, continual testing of our security systems, and updated evaluations of the threat and its weaknesses. It would make sure that new technologies can scale appropriately—in terms of complexity, operation, and sustainability—to meet any terrorist attack, no matter how large.

The technologies developed through this research and development should not only make us safer, but also make our daily lives better; while protecting against the rare event, they should also enhance the commonplace. Thus, the technologies developed for homeland

security should fit well within our physical and economic infrastructure and our national habits. System performance must balance the risks associated with the terrorist threat against the impact of false alarms and impediments to our way of life.

Establish a national laboratory for homeland security. Under the President's proposal, the Department of Homeland Security will establish a laboratory—actually a network of laboratories—modeled on the National Nuclear Security Administration laboratories that provided expertise in nuclear weapon design throughout the Cold War. These laboratories would provide a multidisciplinary environment for developing and demonstrating new technologies for homeland security and would maintain a critical mass of scientific and engineering talent with a deep understanding of the various operational and technical issues associated with homeland security systems. The Department would establish a central management and research facility with satellite centers of excellence located at various national laboratories.

The national laboratory for homeland security would develop, demonstrate, and then transition to the field new technologies and system concepts to counter the specific threats of chemical, biological, radiological, and nuclear terrorism. It would transfer successful technologies to commercial industry for manufacture and long-term support. It would reach out to various regional, state, and local homeland security efforts, gaining familiarity with their issues, and providing them core research, development, test, and evaluation expertise. The laboratory would help the Department of Homeland Security's efforts to conduct and support threat and vulnerability analyses.

Solicit independent and private analysis for science and technology research. Under the President's proposal, the Department of Homeland Security will fund independent analytic support for our homeland security science and technology endeavors. These efforts will support planning activities, including net assessment, preparing agency guidance, and reviewing agency programs and budgets; systems analyses; requirements analyses; assessments of competing technical and operational approaches; and the Department's use of "red team" techniques. (See *Intelligence and Warning* chapter for additional details on "red team" techniques.) The organizations that provide this support to the Department will undertake long-range projects and should have access to sensitive government and proprietary data, including intelligence assessments. They should also possess unquestionable objectivity, staying free from conflicts of interest with other government institutions and the private sector.

Establish a mechanism for rapidly producing prototypes. Technologies developed for a variety of purposes are often directly applicable, or quickly adaptable, for homeland security needs. Under the President's proposal, the Department of Homeland Security will work with other federal agencies to provide a means for rapid prototyping of innovative homeland security concepts based on existing technologies. It would collect unsolicited ideas, evaluate them, and maintain a capability for funding the most promising ideas either directly or in partnership with a relevant agency. The Department would ensure that successful prototypes are sustainable by partnering with the commercial sector for manufacture and long-term support.

Conduct demonstrations and pilot deployments. The Department of Homeland Security would systematically engage in pilot deployments and demonstrations to provide a conduit between the state and local users of technology and the federal developers of that technology. These pilot deployments and demonstrations would serve as a focal point for the development of regional solutions, testing how well new homeland security technologies work under local conditions across America. We must also test how well those technologies work in the case of a large-scale attack.

Set standards for homeland security technology. In order to encourage investment in homeland security science and

technology efforts, the Department of Homeland Security, along with other federal agencies, would work with state and local governments and the private sector to build a mechanism for analyzing, validating, and setting standards for homeland security equipment. The Department would develop comprehensive protocols for certification of compliance with these standards. This activity will allow state and local officials to make informed procurement decisions.

Establish a system for high-risk, high-payoff homeland security research. Bringing the full force of science to bear on our efforts to secure the homeland will require systematic investment in innovative and revolutionary research and development projects. We expect many of these projects to fail due to the technical risks involved, but the payoff for success will be great. The Department of Homeland Security would establish a program with a high level of programmatic and budgetary flexibility to solicit private industry for innovative concepts.

Through these and other focused science and technology programs, we will develop new tools and techniques to secure our homeland. Our enemies are adaptive, constantly searching for new ways to strike us. We must do the same. Just as we did in World War II and in the Cold War, we must use our great strength in science and technology to triumph in the war on terrorism.
